ABUTECH: Leading the Way in Combustion Solution Technology

Pairing advanced technology with unparalleled unit responsiveness and customer service

Q. What is the official name of your company?

A. ABUTECH Industries Inc. ABUTECH, an acronym for Advanced Burner Technologies, is a manufacturer of environmentally friendly combustion solutions. ABUTECH specializes in offering high-efficiency, low-emission burners and flares to various industries, including oil & gas (upstream and midstream), biogas, landfill gas, waste-water treatment, mine gas and many more. ABUTECH manufactures burners, enclosed combustors/flares, vapor combustors, incinerators and thermal oxidizers, all aimed at reducing emissions and increasing efficiency.

Q. What do you most want people to know about your company?

A. ABUTECH manufactures technology that focuses on clean emissions and assistance with regulatory compliance, backed up with unprecedented customer responsiveness.

Q. Where is your company located?

A. ABUTECH's worldwide headquarters is located in Atlanta, Georgia, with regional offices and service hubs throughout the U.S.

Q. What year was the company founded and by whom?

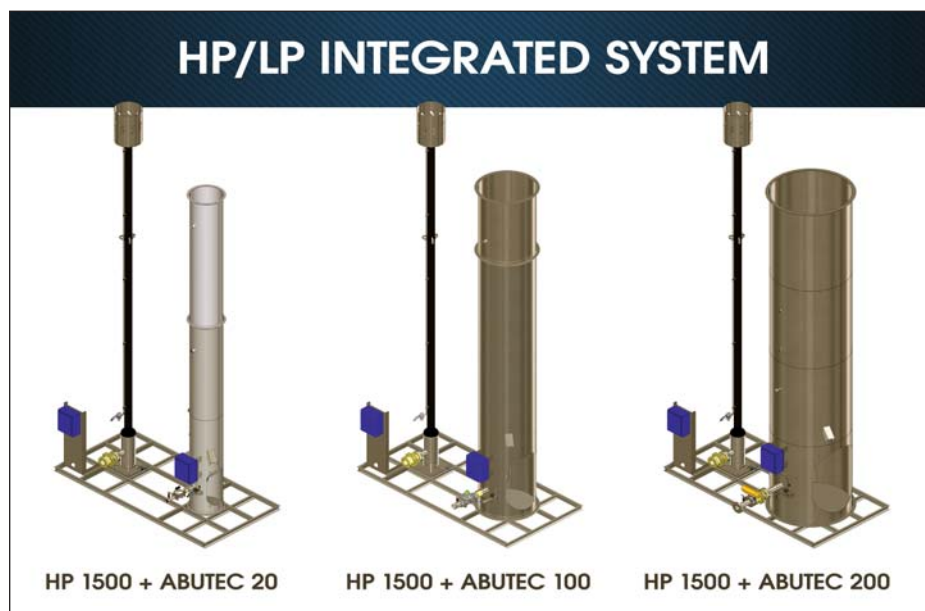

A. ABUTECH was founded in 2007 by Andy Smith and Hans van der Pasch.

Q. What is your company's primary business activity?

A. ABUTECH designs and manufactures emissions control devices, including flares, enclosed combustors, VRUs and oil-field services.

Q. Are there important projects the company is currently a part of or has done recently?

A. Upstream Highlight: The ABUTECH 200 has become an integral part of the emissions control process for larger multi-well pads, thanks to its 99 percent

ABUTECH's newest technology, our High Pressure/Low Pressure (HP/LP) Integrated Solution.

DRE. Six ABUTECH 200s are combined to serve as backup combustion devices on a 16-well site with additional storage tanks. These units provide the necessary DRE when the on-site VRUs are offline.

Midstream Highlight: ABUTECH provides unique combustion solutions for rail, truck and barge loading applications. Our High Temperature Flare (HTF) system is designed to maintain high destruction and removal efficiency, in spite of the varying waste stream gas quality during the loading process. The natural draft design of the HTF eliminates the need for a blower unit, resulting in lower operational cost, reduced maintenance and significantly lowers system total noise output.

Q. How many employees does your company have?

A. ABUTECH has grown to employ 72 individuals throughout our regional offices and service hubs located in Atlanta, Georgia; Gainesville, Georgia; Chattanooga, Tennessee; Denver, Colorado; Greeley, Colorado; Houston, Texas; Minot,

North Dakota; and Oklahoma City, Oklahoma.

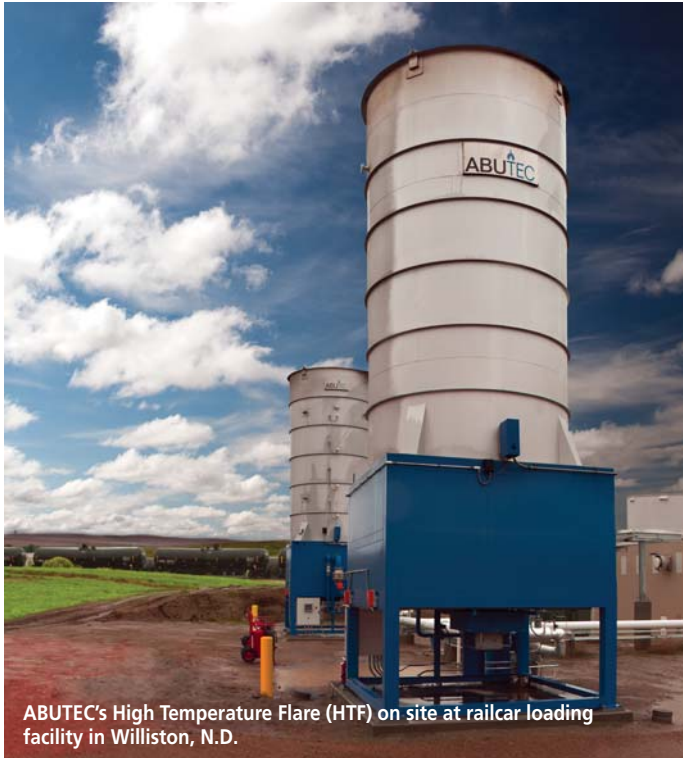

Q. Describe the equipment your company manufactures?

A. Product Spotlight: The ABUTECHs: ABUTECH's most popular emissions control devices are the ABUTECH 20, ABUTECH 100 and ABUTECH 200. With scalable flow rates of 0-20 MSCFD, 20-100 MSCFD and 100-200 MSCFD respectively, the line of ABUTECHs has become a trusted device for sites across the U.S. Each unit is able to be paired with other systems, making them ideal for creating a system to fit each site's unique needs.

Q. Is your company expanding any of its operations or locations?

A. ABUTECH is expanding our regional service reach by opening service hubs throughout the U.S., the next of which will be located in Greeley, Colorado. This service hub will strengthen service capability in northeast Colorado and provide excellent customer service to multiple existing clients in Colorado and Wyoming. The service hub will be used to coordinate safety meetings and fulfill unit and service needs. The hub is

QA AND

ABUTEC's High Temperature Flare (HTF) on site at railcar loading facility in Williston, N.D.

equipped with a yard large enough to house ABUTEC products, including the ABUTEC 20, ABUTEC 100 and ABUTEC 200, in addition to the new High Pressure/Low Pressure integrated solution.

The proximity of the new service hub to existing ABUTEC customers will provide even faster delivery of products and parts and will allow service technicians to quickly attend to equipment and service needs.

Q. Is the company changing any of its services or products?

A. With the number of multi-pad wells on the rise, ABUTEC has created a High Pressure/Low Pressure (HP/LP) Integrated Solution that serves as ABUTEC's most versatile product.

The HP/LP system is ideal for facilities that require dual flow applications, since the package is able to handle high-flow, low-flow and variable-flow applications. ABUTEC has combined the power of the HP 1500 with the safety and reliability of the ABUTEC 20, 100 or 200 to create a system that can be used as a complete unit or as independent units. Another feature of the HP/LP system is its capability to handle a wide range of flow rates - everything from 5 MSCFD to 200 MSCFD.

In addition to its ideal use for dual flow applications, the HP/LP Integrated Solution has been used by ABUTEC customers for backup flaring when their plant was offline for maintenance or experiencing downtime. ABUTEC's HP/LP solution is also EPA compliant and Quad O approved.

Q. What is your company's main strength or its edge over the competition?

A. ABUTEC offers the flexibility of a small company, with the resources of a large corporation. Because we customize units based on individual sites and customer needs, ABUTEC is able to offer the products and services that our partners require.

Q. What new markets, clients or projects did your company attract in the last year?

A. ABUTEC has expanded our reach in the midstream oil & gas segment and offers solutions for rail, truck and now barge

loading.

Q. What do you see as your company's biggest challenge in the next five years?

A. ABUTEC is working to develop products that not only meet, but exceed existing and anticipated environmental regulations, providing our customers with long-term solutions for emissions control.

Q. Does your company have an anniversary or other landmark event coming up?

A. 2015 marks ABUTEC's 5th anniversary of Bakken installs. ABUTEC has approximately 2,000 units installed in the Bakken, and continues to grow.

Q. What is the average length of time employee's work for the company?

A. Although ABUTEC has only been in business for 7 years, our employee attrition is low and our commitment to and investment in our employees is high.

Q. Has your company been involved in any community projects or charity events?

A. ABUTEC was proud to partner with SM Energy for the "Big Sky Birds and Birdies" sporting clay shoot and golf scramble, benefitting the Montana Hope Project, which provides wishes to critically ill children in Montana.

Q. What is the address of your company's Web site?

A. www.abutec.com

ABUTEC service technicians installing an ABUTEC 100 in the Williston Basin Field.

Lister Industries, commitment to excellence in the most extreme conditions

Rig mats covering the world since 1968, in 30 countries and on all seven continents

PHOTO COURTESY LISTER INDUSTRIES

Q. What is the official name of your company?

A. Lister Industries Ltd. A second generation family owned operation with the 3rd just around the corner.

Q. Is your firm a subsidiary or affiliate of other companies? If so, please name those firms and their relationship to your company.

A. We have many relationships with rental companies in North America and pride ourselves in referring people to them for location based enquiries. This works as a win, win for everyone as we strictly manufacture and don't compete with them, yet are able to satisfy the end user with an affordable delivery and usage for short term projects where buying doesn't make sense.

Q. What do you most want people to know about your company?

A. Family owned & operated since 1973. Customer service is paramount. We listen to our customers' needs and adjust accordingly which means customizing mats, line crossings, ramps or whatever they require. We have the only engineered mats in the industry which are the strongest and longest lasting rig mats in the industry.

Q. Where is your company located?

A. Edmonton Alberta, we have two manufacturing facilities.

Q. What year was the company founded and by whom?

A. Lister Oilfield Welding Ltd. was established by Harold Lister in 1953. He started by designing and manufacturing his own boilers & air heaters in Edmonton at the main plant where we are still based today. When oil exploration in the remote north created unique needs, Harold met the demand with his new line up of specialized cold weather products, including rig mats.

Harold sold his business in April 1978, to Don & Mary Rowland. Over the years Lister has introduced new specialty products while continuing to refine the reliable Lister rig mats.

Q. What is your company's primary business activity?

A. Manufacturer of rig mats, line crossings and custom steel fabrication. The average life of a Lister Rig Mat is 10 years, but many have continued to be active for 15-20 years. Our rig mats consist of two continuous wood sections with laminations glued and nailed together for superior rigidity. The glue between the wooden planks reduces liquid absorption and hence eliminates weight gain in the field. Strength is mainly provided by the steel beams, and the wood sections assisted by lateral flat bars transfer part of the load from one beam to another.

Lister Interlocking Road Mats, the new entry in the earth friendly area of ground protection, allowing transportation of

machinery and materials into remote areas on these mats without any permanent damage. The mats are constructed from structural steel and glue laminated wood packets. The hook and eye assembly allows for multiple mat pads which are expandable in any direction. This construction method results in a superior product delivering longer mat life and a more durable surface.

Q. Are there important projects the company is currently a part of or has done recently?

A. Lister has recently completed engineering, design and installation of an all steel rig mat in virtually any size, for the new Safety and stability being the key issues, these mats have put an end to crushed wood mats especially the cross beam and cross laminated style mats where there is no connectivity. Those mats simply cannot hold the load transfers of 4 relatively small stomper pads which carry the entire weight of the rig in a small footprint. These new field tested steel mats allow these behemoths to move on the pad in any direction without compromising stress load & deflection. We have been working closely with Chevron in the U.S. along with their contractors and are having great success.

Q. How many employees does your company have?

A. We employ 50 full time welders, laborers and office personnel, with many of them being long term.

Q. Describe the equipment your company uses and are there any new equipment purchases planned?

A. We have custom fabricated assembly lines for both lumber and steel components. We are continuously striving to manufacture and provide the best rig and road mats, line crossings and ramps to meet the needs of our clients.

Q. Is your company expanding any of its operations or locations?

A. We expanded, opening an additional facility just down the street from our main plant and office 9 years ago to keep up with the growing demand. We have also learned over the years to try not to tackle too much and to be satisfied taking care of fewer people correctly instead of too many too fast and making costly mistakes by over committing. Grow slow and steady and you will survive & thrive!

Q. Is the company changing any of its services or products?

A. We strive to continuously monitor components to adapt to the ever changing drilling field adjusting materials and design wherever necessary.

Q. What is your company's main strength or its edge over the competition?

A. Personal service, common sense approach and backing up what we say we will do. With our many years of experience in rig mat design and manufacturing, we are committed to excellence in continuing to meet the challenges of the oil and gas drilling and service industry. After studying the ups and downs of this industry and having the ability to track it by sales over the past 61 years, we know that you must tend to the small companies as well as the large ones as word of mouth is your best marketing tool. We have good market share with many long

PHOTO COURTESY LISTER INDUSTRIES

time loyal customers around the world and plan on maintaining that reputation for our children to carry on the tradition.

Q. What is the most challenging work/contract the company has undertaken?

A. It is and always has been fulfilling large orders overseas under extreme time limits where transportation issues are out of our hands.

Q. What are the biggest obstacles to completing work your company undertakes?

A. Material supply in a timely fashion and the ability attract & retain qualified employees.

Q. What do you see as your company's biggest challenge in the next five years?

A. The price of oil is always the main factor. Over the past 61 years we have seen extreme lows and wonderful pinnacles of growth & success. We don't expect that to change.

Q. Does your company have an anniversary or other landmark event coming up?

A. No but we celebrate with company parties and picnics often to keep morale at a great pace.

Q. What is the average length of time employee's work for the company?

A. Employee longevity average is 5 to 10 years with many at the 15 year mark.

Q. What is your company's safety record? What steps does the company take to ensure a safe work environment?

A. We have a good safety record and have implemented the COR program & policies as the main contractors in the industry recognize this program to be top notch and it keeps us on track.

Q. Has your company been involved in any community projects or charity events?

A. We belong to several local and international organizations and also support our employee's children's sports and fund raising ventures.

Q. What is the address of your company's Web site?

A. www.ListerIndustries.com

M SPACE bringing quality housing to the Bakken one building at a time

Dedication to professional integrity earns this company recognition as a leader in modular and permanent building solutions

PHOTO COURTESY M SPACE

PHOTO COURTESY M SPACE

Q. What is the name of your company?

A. M SPACE

Q. Does your company operate using any other names?

A. Our residential division is called M SPACE Housing.

Q. When did you first start doing business in the Bakken Region?

A. We first started working in the Bakken in 2012.

Our first project was additional classroom space for the Williston School District. We provided them with 34,000 square feet of classroom and restroom space at two different locations. We then expanded to residential construction, building seven housing developments within a year.

Q. What growth and success has M SPACE had outside of the Bakken region?

A. M SPACE was founded in 2001 and grew quickly from a small modular leasing company to a large, fully integrated general contractor by building relationships with valued clients, dedicated employees and trusted subcontractors. We have created proven technologies, systems and processes to provide comprehensive building solutions.

We have offices located throughout the United States and offer a diverse range of building types. Projects range from small temporary buildings to large multi-story, permanent complexes. We work with a variety of industries including education, healthcare and government as well as commercial and residential housing.

We initially provided temporary/relocatable buildings, which offer speed and flexibility and quickly branched out to include

permanent modular construction, an alternative to traditional construction methods, which utilizes a significantly streamlined construction process. We have also completed projects that combine modular and traditional construction, the most recent being a two-story 65,000 square foot state-of-the-art high school which consisted of 24 classrooms, a presentation hall, common areas, administrative offices, a full service kitchen, restrooms and a nurse's office.

Q. What is your company's primary business activity in the Bakken region?

A. Our primary business in the Bakken is our six housing developments that currently have homes available for rent; Ridgeview, Ponderosa, Hillview, Countryview, Dakota Ridge and Bison Run. The developments meet a variety of housing needs including work-force/efficiency, single family and corporate/employee housing.

Q. What are your goals as a housing provider in the Bakken?

A. Our main goal is to bring quality housing options to the region. Our homes offer convenient locations, superior amenities and pricing relative to the market. We have studio, 1, 2 and 3 bedroom homes. Whether someone is looking for single occupancy, corporate shared housing or family living, we have an option to meet their needs.

Our homes are equipped with everything from furniture to housewares and linens. We also provide HDTV's with cable or satellite TV.

Q. Where are your housing developments located?

A. Ridgeview - Fairview/Dore, ND, studio and 1 bedroom/1 bathroom; Ponderosa - Alexander, ND, studio and 1 bedroom/1 bathroom & 2 bedroom/2 bathroom; Hillview - Alexander, ND, 3 bedroom/ 2 bathroom; Countryview - Watford City, ND, 3 bed-

**QA
AND**

PHOTO COURTESY M SPACE

room/2 bathroom; Dakota Ridge - Watford City, ND, 3 bedroom/2 bathroom; Bison Run - Watford City, ND, 3 bedroom/3.5 bathroom.

Q. Are there important projects the company is currently a part of or has done recently?

A. Our newest development, Bison Run, is underway in Watford City. It's a community of well designed, 3 bedroom and 3.5 bathroom twin homes that are located a short distance from restaurants, grocery and retail stores. The homes at Bison Run are available furnished or unfurnished, come with washer and dryers and have large 2-truck garages. This development also offers wide paved roads and a club house that is coming soon. We have tenants currently living in the completed homes and are preleasing the homes that are under construction. Phase one is scheduled for completion at the end of this year.

Q. We understand that you also have a commercial park in Alexander. What can you tell us about it?

A. We are currently providing commercial and light industrial buildings at the Alexander Energy Park. This 120 acre property sits at the intersection of Highway 85 and 68, halfway between Williston and Watford City. The energy park offers prime highway exposure with lots for sale as well as build-to-suit sale and lease options. The Alexander Energy Park consists of mixed use industrial buildings that include, but aren't limited to, commercial condominiums, warehouse space with drive through bays, retail and storefront options and administrative office space. The energy park will also soon be the home to a travel plaza offering tenants a convenient place to get food, fuel and other essentials. Another unique feature of the Alexander Energy Park is the close proximity to our Hillview property, offering companies the opportunity to house employees nearby. Companies located within the Alexander Energy Park include Wanzek, a subsidiary of MasTec, JW Power and XTO a subsidiary of Exxon Mobile.

Q. What is your company's main strength or its edge over the competition?

A. We have an exceptional team that has the knowledge, experience, integrity and commitment to get the job done right. We share a dedication and passion for quality, which we bring

to every project. We provide more than just a roof overhead. We provide high quality, comfortable communities for people to live in and plan on providing this in the Bakken for years to come. Another unique feature of our company is we have an on-site maintenance/management team at our developments.

Q. What has the Bakken meant for the growth of M SPACE?

A. The Bakken region was initially a small portion of our business, however, due to our success in the region, it has become a larger piece and we expect that it will continue to develop in the years to come. We have strategically selected McKenzie County as the location for our housing developments and commercial park. McKenzie County is the largest county in ND and the top in the state for oil producing. According to the North Dakota Statewide Housing Needs Assessment, McKenzie County is expected to show the largest percentage of growth of any county in the state. This growth makes it an ideal location for businesses as well as workers to reside.

Since starting work in the Bakken we have added approximately 20 employees to support our efforts in the region and are pleased that we were able to provide these jobs locally. Our team enjoys living in the area and has become part of the community.

Q. If someone is interested in learning more about the housing options you have available what should they do?

They can call us at 701-484-1891 and speak with a leasing agent. The agent will be able to tell them all about the development they are interested in and schedule a tour. They can also visit our website at www.mspacehousing.com to see pictures and floor plans of our available developments.

Q. If someone is interested in learning more about commercial construction or the options available at the Alexander Energy Park what should they do?

They can call our toll-free number - 877-677-2231 or visit our website at www.mspaceholdings.com.

Q. What is the address of your company's Web site?

A. www.mspacehousing.com / www.mspaceholdings.com

NETZSCH, developing, manufacturing and marketing pumps for six decades worldwide

Pump company excels with world class products earning 2014 Global Product Leadership Award

Q. What is the official name of your company?

A. NETZSCH Pumps North America, LLC

Q. Is your firm a subsidiary or affiliate of other companies? If so, please name those firms and their relationship to your company.

A. The NETZSCH Group is a mid-sized, family-owned German company engaging in the manufacturer of machinery and instrumentation with worldwide production, sales, and service branches. Pumps & Systems is the largest of the three business units which include Analyzing & Testing and Grinding & Dispersing.

NETZSCH has over 3,200 employees, 140 sales and production centers in 28 countries worldwide.

Q. What do you most want people to know about your company?

A. We want to be your progressing cavity pump, rotary lobe pump and multiple screw pump supplier of choice in the USA by providing the highest quality products and the best service. Our customers' expectations of superior products and service are legitimate and we meet them by means of innovative solutions, professionalism, reliability and good value. Our success lies in our broad application knowledge, world-class products, over 60 years of experience, close and trusting customer relationships and the reputation as world market leader for progressing cavity pumps.

We manufacture according to international standards such as API 676 and are certified according to DIN EN 9001: 2000. We

weld in accordance with ASME IX and we use materials such as chromium-nickel steels, duplex and super duplex steels, hastelloy, titanium, as well as synthetic and ceramic materials. NBR, HNBR and Viton are the elastomers we use.

Shaft seals are available according to API 682 with installation space API610. Stuffing-box packing, lip seals, single-acting mechanical seals with and without quenching, dual-acting mechanical seals (back-to-back or tandem) as well as shaft-seal-free designs with magnetic coupling. Thermo syphon systems according to API designs.

NEMO® Progressing Cavity Pumps can handle fluids having the following properties: Shear sensitive, low to high viscosity, with or without solids, dilatant or thixotropic, and abrasive.

TORNADO® Rotary Lobe Pumps can handle any kind of liquid including product containing gas, solids or fibrous matter, lubricating and non-lubricating media, media with high or low viscosity, shear sensitive fluids. This pump type offers full-service-in-place, tolerance for dry running and reversible operation.

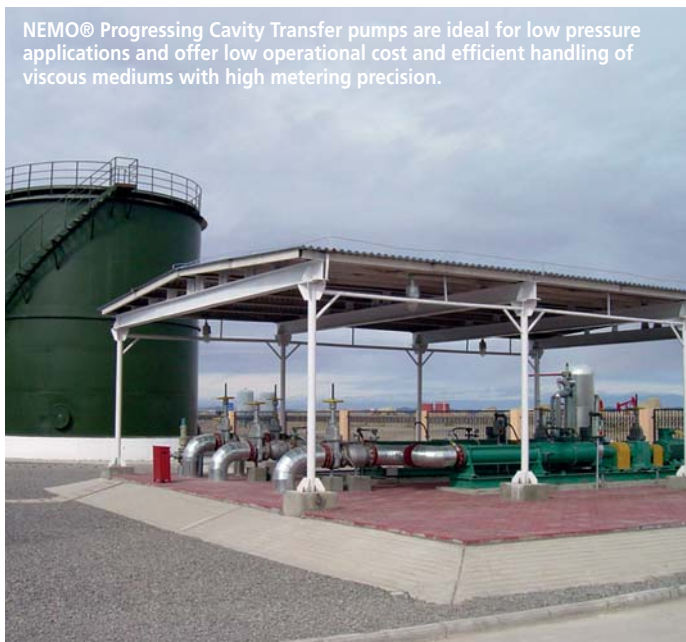

Multiple screw pumps can handle both high and low viscosity materials with a pulsation free delivery, for clean lubricants to low abrasive products and lubricating to non-lubricating product. Robust and hydraulically balanced designs.

Q. Where is your company located?

A. The North American headquarters is located at 119 Pickering Way, Exton, PA 19341 with sales and service facilities all over the U.S. and Canada.

**QA
AND**

PHOTO COURTESY NETZSCH

NEMO® Progressing Cavity Transfer pumps are ideal for low pressure applications and offer low operational cost and efficient handling of viscous mediums with high metering precision.

NEMO® pumps provide constant, smooth and not pulsating flow for a wide range of hydrocarbons. The volume remains practically unaffected by viscosity changes which ensures accurate flow readings downstream and eliminates the need for costly pulsation dampeners.

PHOTO COURTESY NETZSCH

PHOTO COURTESY NETZSCH

NETZSCH Multiphase pumps can handle the unpredictable flow rates that occur in many oil fields and can efficiently transport oil/water mixtures with a high content of sand and/or gas.

Q. What year was the company founded and by whom?

A. In 1873 NETZSCH was founded by Thomas Netzsch and his brother Christian in Selb/Upper Franconia. In 1969 the first U.S. location was opened in Exton, PA.

Q. What is your company's primary business activity?

A. Providing positive displacement pumps to the oil and gas industry.

Q. How many employees does your company have?

A. NETZSCH has over 3,200 employees worldwide.

Q. Describe the equipment your company uses and are there any new equipment purchases planned?

A. NETZSCH has state of the art manufacturing facilities in Germany, Brazil, China, India, Japan and in the U.S.

Q. Is your company expanding any of its operations or locations?

A. Yes, we are constantly growing. Just recently, our North American presence was expanded to include sales and service centers most particularly for the O&G markets in Bakersfield, CA and Odessa, TX to be more responsive to our customers in the oil and gas rich areas of the United States.

Q. Is the company changing any of its services or products?

A. NETZSCH has just introduced a multiple screw pump line to the North American Market. We also have already-established technical expertise for this kind of pump in a wide range of markets.

Q. What is your company's main strength or its edge over the competition?

A. NETZSCH is one source for progressing cavity pumps including artificial lift DH pumps, rotary lobe pumps and now multiple screw pumps with experts available to meet the customer's specifications from simple replacement to challenging customizations and systems.

Q. What new markets, clients or projects did your company

attract in the last year?

A. LACT Unit Skid manufacturers around North America.

Q. What is the most challenging work/contract the company has undertaken?

A. We are producing pumps for the harshest environments - whether they are installed in the desert of North Africa or in the Arctic Circle. Our team and our equipment have repeatedly proven our capabilities.

Q. Does your company have an anniversary or other landmark event coming up?

A. For the second time since 2011, NETZSCH was presented with a highly appreciated best practices award by Frost & Sullivan, the U.S.-based growth partnership company. In its motivation statement, Frost & Sullivan explained that the 2014 Global Product Leadership Award in progressive cavity pumps for oil and gas was issued by evaluating total client experience and strategy implementation excellence using a scorecard, including 10 benchmark criteria for both product leadership and management culture, which has set NETZSCH clearly apart from the other companies in the field.

Q. What is the average length of time employee's work for the company?

A. NETZSCH has 10 employees working for over 50 years and 38 with over 40 years of employment. We are proud of all our employees; they are all a part of the NETZSCH family.

Q. What is your company's safety record?

A. NETZSCH is a safety conscious organization which values Health, Safety and Environmental Protection aspects throughout all stages of its work. Our clear objective is to avoid harm to people, property and the environment by adopting a proactive approach to effective risk and safety management. We follow high standards with local policies, all over the world. Following is a selection of the activities that are currently in place worldwide: Special in-house safety programs in North America, in-house fitness exercise and interactive online health and safety education in Germany, recreation support - for instance at the "NETZSCH ACAEN Club" in Brazil, safety instruction flyers and handbooks for employees and visitors in all plants around the world, state of the art waste separation and environmentally safe disposal fulfilling or even exceeding local regulations in India and China, running a company owned wastewater treatment plant in Brazil and implementation of DIN ISO 14001 and OHSAS 18001 in Germany. All these activities along with others help us to achieve continuously low incident statistics throughout the world and a better environmental protection.

Q. Has your company been involved in any community projects or charity events?

A. While all over the globe our local offices and employees are involved in various community and charity outreach events, the Gracious Home charity in India for the care and protection of destitute women, senior citizens, orphan children and newborns irrespective of caste, color, creed or religion is special to the NETZSCH family.

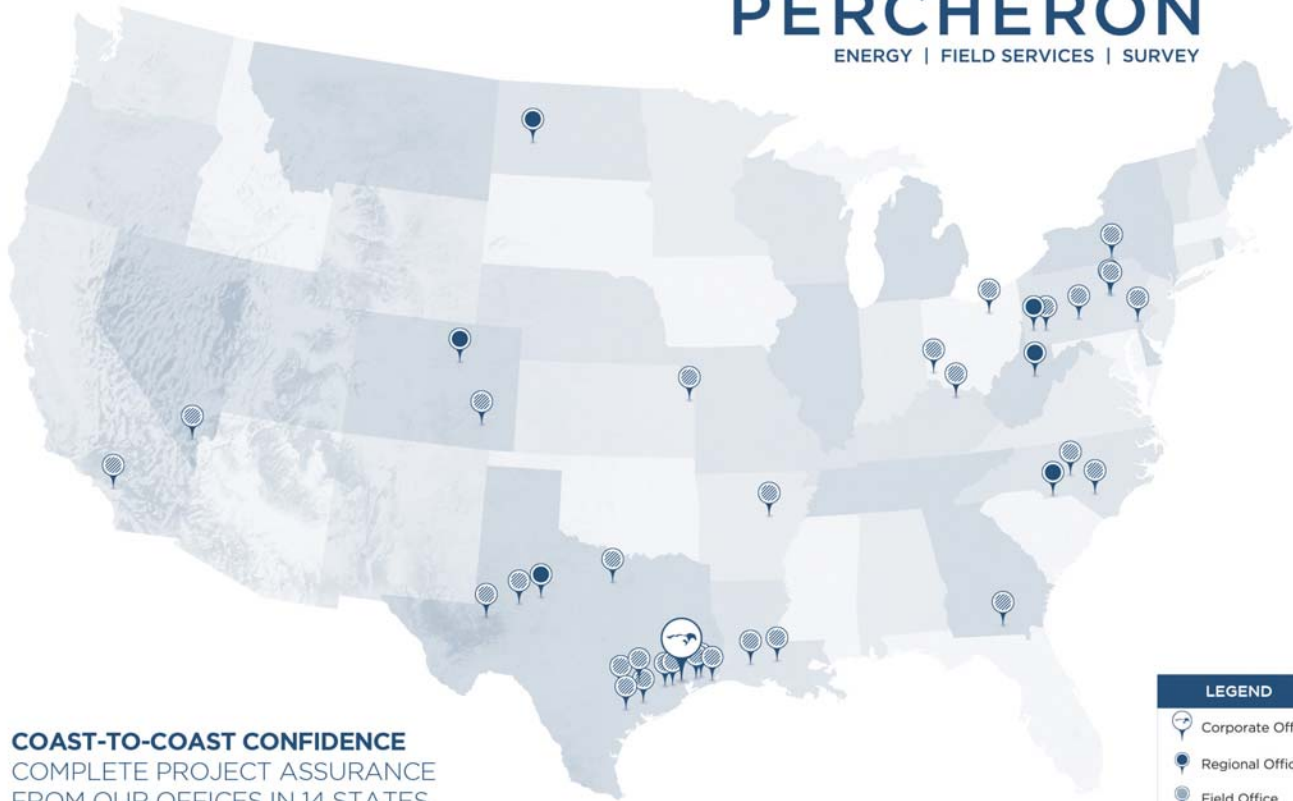

Q. What is the address of your company's Web site?

A. www.netzsch.com

PERCHERON

ENERGY | FIELD SERVICES | SURVEY

COAST-TO-COAST CONFIDENCE
COMPLETE PROJECT ASSURANCE
FROM OUR OFFICES IN 14 STATES.

Percheron delivers leading-edge solutions using the latest technologies

Company's web-based tools, GIS and people ensure reliable results each and every time

Q.What is the official name of your company?
A. Percheron, LLC

Q. Is your firm a subsidiary or affiliate of other companies? If so, please name those firms and their relationship to your company.

A. Percheron, LLC has three subsidiary divisions: Percheron Energy, Percheron Field Services and Percheron Survey.

When it comes to exploration and production land management, Percheron Energy's most experienced and dedicated professionals handle upstream projects across the country by leveraging a complete range of fully integrated resources that keep projects on track and keep delays, surprises and worry out of the process. Our professionals are members of the American Association of Professional Landmen (AAPL) and provide attention to detail that is unmatched in the industry.

For right-of-way projects, negotiations and acquisitions, Percheron Field Services has proven itself as the only nationwide comprehensive provider. Its industry-certified experts understand pipeline, electric transmission and public project right-of-way needs and employ the latest project management technologies

that deliver consistent results. Percheron's right-of-way experts have a vast amount of experience and maintain heavy involvement in the International Right of Way Association (IRWA).

Percheron Survey maintains accuracy, consistency and reliable results with its licensed, vastly knowledgeable experts who work to understand clients' specific business and project needs. From right-of-way acquisition surveys to comprehensive environmental services, each project's demands are met consistently with extensive quality assurance processes and the industry's leading technology.

Q.What do you most want people to know about your company?

A. Percheron is the first nationwide integrated land services provider, offering specialized expertise in land, right of way, surveying and environmental services. Percheron's three business units: energy, field services and survey are committed to the use of cutting edge technology, exceptional client service and efficient project management. Percheron brings industry experts, nationwide access, leading technology and quality assurance to every project. That is how our customers know their needs are being

handling the right way, every time. For upstream project support, right-of-way needs and precision surveying capabilities, Percheron's fully integrated land services offer unrivaled consistency and comprehensive support.

Q. Where is your company located?

A. Percheron is headquartered in Houston, TX. We currently have 39 offices in 14 states throughout the country. Percheron regional offices are located in Dickinson, ND, Denver, CO, Midland, TX, Charlotte, NC and Bridgeport, WV.

Q. What year was the company founded and by whom?

A. Percheron, LLC was formed out of the merger of three leading land services companies: Mason Dixon Energy, OGM Land and Percheron in June 2012.

Q. What is your company's primary business activity?

A. For upstream project support, right-of-way needs and precision surveying capabilities, Percheron's fully integrated land services offer unrivaled consistency and comprehensive support—all across the United States.

Q. Is your company expanding any of its operations or locations?

A. Percheron has recently established the Dickinson, ND and Midland, TX Regional offices to better serve our existing client base while supporting the continued development of the survey, field services and energy divisions of the company in the region.

Q. What is your company's main strength or its edge over the competition?

A. Our people, our processes and our technology.

People: With a network of over 1,000 highly skilled professionals, Percheron can help connect you with licensed, certified and reliable industry experts who know how to handle your projects the right way. And even though we're one of the largest businesses of our kind in the country, we go the extra mile to serve every customer as if you are our only customer.

Processes: Tracking the multiple disciplines of a linear project can seem impossible with limited internal resources. That's why Percheron implemented the Program Management Office (PMO), offering a single point-of-contact across Percheron's service offerings.

Our PMO analysts evaluate the project at its onset and document the project's scope of work, expected deliverables, key milestones and budget. Throughout the project, our analysts monitor productivity and cost as they relate to the original project scope and provide complete project transparency. In addition, the PMO analysts conduct internal audits throughout the project to assess the quality of the output as well as ensure the deliverables meet scope requirements. Finally, through effective stakeholder and communication management, PMO tracking reports allow macro-level tracking of project deliverables, timelines and costs and notify key stakeholders of potential issues before they become critical problems.

Technology: Through Nsite Technology, Percheron offers a cutting-edge web-based GIS reporting tool. These web-based tools offer an easily accessible, fully integrated business intelligence resource that gives you dashboard-delivered information throughout all phases of your projects. This represents complete coverage for feasibility, survey, acquisition, environmental, construction and

document management. Percheron offers the resources needed to ensure the accuracy and proven performance for total project assurance.

Q. What does Percheron's Bakken profile consist of?

A. Percheron's Bakken management team and recent project experiences consist of:

BAKKEN SHALE EXPERIENCE: From right of way, surveying, lease acquisition to environmental support, Percheron is the only name you need for consistent, reliable and fully integrated land services throughout the United States. For your convenience, Percheron has Regional offices in Denver, CO, and Dickinson, ND, to support operations in the Bakken Shale.

MELISSA WURTZ, SR/W A, field service division, regional director, mid-continent: Wurtz has been in the right of way industry for 15 years. Her experience includes field work of easement and property acquisition, title research coordination and review and full project oversight on pipeline, municipality and electric projects. Wurtz provides quality assurance oversight on Percheron projects in the mid-continent division.

DON JOHNSON, LS | survey division, regional director, Rockies: Johnson has over 30 years experience surveying with the last 12 years intensely focused on oil and gas projects. He is registered in North Dakota, South Dakota and 3 other western states with his projects lying in the public land survey system. His past experience is comprised of a mixture of pipelines, gathering lines and well pad preliminary and final surveys. He is highly skilled in project coordination and communication with land owners, public agencies, and owner/producers. He is very cognizant of a client's schedule and has the capacity to direct field and office personnel to ensure the successful and timely completion of their project. Johnson's experience in North Dakota enables him to be proactive during client meetings and assist with the survey component of the well plat permitting process.

RICK CORMAN, RPL, energy division, regional land director, Rockies: Corman has over 8 years' experience in field work and managing numerous high profile projects in WV, PA, OH, NY, IL, CO, ND, MT, WY and UT. He began his land career working in the field researching both surface and mineral title, lease and ROW negotiations, curative and due diligence projects. Corman is responsible for the oversight and quality execution of the projects operated out of the Denver Regional office as well as business development in the region.

Here are some of Percheron's projects in the Bakken:

Percheron field services: TESORO; multiple greenfield and operations support projects; approximately 750 miles of operations plus additional 100 miles in future construction in 9 counties in North Dakota and 2 in Montana; station & building leasing; purchase valve sites, routing & site selection, title research, right of way acquisitions, damage settlements, permitting, planning & zoning, operations and maintenance.

Percheron Survey: MONTANA-DAKOTA utilities | Watford City, ND, boundary survey and new construction layout for subdivision.

PHILLIPS & JORDAN | Watford City, ND, right of way and centerline monumentation for 4.3 miles of highway and reference monuments for public land section corners.

Percheron Energy: NEW field exploration | McKenzie County, ND, 2000 parcels; minerals and surface title leasing.

Q. What is the address of your company's Web site?

A. www.percheronllc.com

Wanzek: building strong from the inside out

Company has brought value and excellence to every project for over 40 years

Q. What is the official name of your company?

A. Wanzek Construction, Inc.

Q. Is your firm a subsidiary or affiliate of other companies? If so, please name those firms and their relationship to your company.

A. Wanzek is a subsidiary of MasTec, Inc., a leading infrastructure construction company operating mainly throughout North America across a range of industries. For more information visit www.mastec.com.

QA AND

Q. Where is your company located?

A. West Fargo, ND

Q. What year was the company founded and by whom?

A. September 14, 1971 - State of North Dakota - Leo Wanzek

Q. What is your company's primary business activity?

A. We are a heavy industrial contractor.

Q. How many employees does your company have?

A. It varies by work schedule and the time of year, anywhere from 600 - 1000+.

Q. What is the address of your company's Web site?

A. www.wanzek.com. You can also follow our company on LinkedIn.

Q. What do you most want people to know about your company?

A. Motivated by our vision of "Building Strong", we strive to be a leading construction company through our people, safety culture, experience and dedicated teams.

As a direct-hire, heavy industrial contractor, Wanzek serves

BUILDINGSTRONG

Together

KATE NATION

Wanzek has completed projects throughout North America. Backed by our parent company, MasTec, Inc., a leading North American infrastructure construction company, we have the geographic reach, scalability and overall financial strength to deliver the highest quality and most competitive solutions available.

the industries of power, renewable energy, oil & gas, heavy/civil and industrial agriculture. After more than four decades completing successful projects for our clients, we understand that each job site has its own unique characteristics and challenges and that planning, preparation and communication with our clients is essential for the success of each project.

Q. Are there important projects the company is currently a part of or has done recently?

Wanzek recently added a 600 AT crane to our extensive fleet. Wanzek's fleet of all terrain, rough terrain, lattice-boom crawlers and hydraulic truck cranes, has earned recognition on American Cranes & Transport Magazine's list of North America's Largest Crane Owning companies.

TARA KESSLER

Wanzek provides turnkey project execution, mechanical, structural, civil and concrete and construction management for midstream facilities construction. Our midstream construction services include providing pump and compressor stations, loading terminals, metering stations, gas and liquid storage and gas processing.

A. Wanzek Construction was selected as the balance of plant contractor for a project that is using a cutting edge prototype wind turbine. Wanzek will utilize its Terex Demag CC2800 crane in super-lift configuration to perform this work. Once the prototype is completed, Wanzek will be the only contractor in North America with experience assembling this particular wind turbine.

Q. Describe the equipment your company uses and are there any new equipment purchases planned?

A. Wanzek's fleet of all terrain, rough terrain, lattice-boom crawlers and hydraulic truck cranes, has earned recognition on American Cranes & Transport Magazine's list of North America's Largest Crane Owning companies. Wanzek's crane fleet ranges from Rough Terrain 28-75 ton to Crawler 100-660 ton. Our featured cranes include Mobile 38-275 ton, Terex CC 2800 660 ton superlift, Terex CC 2500 550 ton superlift/luffer, and ATC link-belt 3275 275 all terrain ton.

Q. Is your company expanding any of its operations or locations?

A. Wanzek is currently constructing a new facility in Alexander, ND that will serve as a depot for the firm's crane equipment storage and maintenance. This six-acre site features an 8,000-sq-ft shop and office building and will also provide living quarters for up to twenty four crane services team members working in the Bakken. The project is slated to be completed in May 2014.

Q. Is the company changing any of its services or products?

A. In the Oil & Gas Industry

Wanzek's demand for crane services in oil-rich Western North Dakota has expanded significantly, with opportunities in a wide range of services to the oil and gas industry. In addition to a fleet of company-owned cranes and equipment, Wanzek's experienced direct-hire crews and knowledgeable project managers enable consistent delivery of the highest quality work. A dedication to performing efficient management services using leading edge technology, whether software, equipment or train-

ing, allows Wanzek to complete jobs at a high standard of excellence.

Wanzek oil and gas services comprises of facilities construction, including pump and compressor stations; crude oil and gas plant expansions; skid & module fabrications; bulk terminals & storage and LNG/GNL storage as well as reliability and maintenance services, including pipeline maintenance; facilities maintenance; capital modifications; hydrostatic testing support, and drilling support including crane services support; well pad development; equipment settings and roustabout services.

In Operating & Maintenance Services

Wanzek Construction, Inc., a MasTec company, is continuing to expand its operations and maintenance services in the wind industry. As a top-tier wind contractor, Wanzek has erected over 2800 turbines and constructed over 5400MW of wind energy generation capacity. The company has expanded this success with a growing O&M services department that provides wind project owners and operators a single-source solution for mechanical, electrical, civil and crane services. Operations Manager, Rob Lee states, "Wanzek's success in wind power construction led to a strong understanding of the current O&M landscape."

Q. What is your company's main strength or its edge over the competition?

A. Company owned equipment fleet and highly trained teams. Wanzek continually strives for excellence. We focus on continuous improvement and the results that come from aligning purpose, people and values. We provide our teams with the resources and tools needed to be successful. The result is achieving customers' expectations safely, profitably and in a manner that is rewarding for both our customers and our team.

Trade Shows that Wanzek will have booths at during 2014: ND Petroleum Council, Dickinson, ND, September 24-25th; GRC (Geothermal), Portland, OR, September 28-October 1st; Solar Power International, Las Vegas, NV, October 20-23rd; POWER-GEN, Orlando, FL, December 9-11th.

Active companies

Attention readers: The following upstream Exploration & Production listings include well operators in North Dakota and Montana that produce at least 1,000 barrels of oil per day from the Bakken petroleum system, which has a number of geological zones, including Three Forks. No companies producing over the border in Canada are included because daily Bakken system output is not reported by the government agencies there.

The only non-operators listed in this section are Northern Oil and Gas and PetroShale because of the size of their investments and their involvement in their partners' operations.

The Bakken Oil & Gas Directory is essentially a marketing tool for regular advertisers in Petroleum News Bakken — a value-added product, per se. But it is also meant to be of use to Petroleum News Bakken readers, so oil and gas companies, the heart of the activity in any oil province, are listed in the directory under Exploration & Production Companies, whether or not they are regular advertisers in the newspaper.

Associations and government offices involved in the Williston Basin's Bakken are also listed, whether or not they advertise, as a service to Petroleum News Bakken readers, all of whom receive a copy of this directory.

The production numbers included in the directory are from September 2014 — the latest month reported to the states of North Dakota and Montana by most of the companies — and exclude production from wells on confidential status. The information comes directly from Petroleum News Bakken's analysis of information released by the North Dakota Industrial Commission and the Montana Board of Oil & Gas Conservation Commission.

Production from Northern Oil and Gas and PetroShale is not listed because they do not operate any wells and so the aforementioned state agencies do not collect production information from them. Both companies' websites, however, are listed herein. It is possible production information (or contacts for more information) are listed on those sites.

All corrections and suggestions should be sent to me, Kay Cashman, via email at publisher@petroleumnewsbakken.com.

Note: Hess-owned Hess Bakken Investments production was added to Hess' separate production, so their total output determined their ranking. Whiting is in the process of acquiring Kodiak, a merger that is expected to close in December 2014. Initially it will boost Whiting's average daily production by about 51,000 barrels a day. And ConocoPhillips-owned Burlington production was added to ConocoPhillips' separate Bakken production.

Information derived from the preliminary September 2014 Oil and Gas Production Report published by the North Dakota Industrial Commission, Department of Minerals' Oil and Gas Division. This is oil produced by wells operated by these companies; it does not identify the percentage of oil from the Bakken petroleum system (including Bakken, Three Forks, Pronghorn, Sanish, etc.) that is owned by each company AND it does not include production from wells operated by others, in which these companies might hold an interest. It also does not include Bakken system oil production from wells on confidential status.

Established in: 2011
Description from Halcón: Halcón Resources Corporation (Halcón) is an independent energy company focused on the acquisition, production, exploration and development of onshore liquids-rich assets in the United States. While Halcón is a new venture, we operate on a proven strategy used in prior, successful ventures. We have an experienced staff and use the most advanced technology, enabling us to make informed and effective business decisions. Spanish for hawk, Halcón embraces the vision and agility to become a resource powerhouse in the oil and gas industry.

Our writers scout for news the old-fashioned way — digging through government agency files, covering legislative hearings, scrutinizing SEC filings and developing contacts within industry and government. Petroleum News Bakken is written specifically for industry and government readers, plus financial analysts that cover companies with operations in the Bakken play in North Dakota, Montana, Saskatchewan and Manitoba.

COMPANY NEWS *in brief*

Fortis Energy Services expands safety program

Fortis Energy Services, a leading national oil and gas service company providing oil and gas well services from completions throughout the production life cycle, announced the expansion of its corporate safety program with the appointment of Jeffrey Painter, CSHO as the new HSE director.

"The appointment of Jeffrey Painter as our new HSE Director demonstrates our company's commitment to maintaining a safe and healthy work environment. There is no greater priority at Fortis than safety. This is true at all levels of our operations. Safety is our core value and we pursue it without compromise," said Nathan Conway, CEO of Fortis.

Painter brings to Fortis Energy Services scores of the industry's most recognized safety certifications. He is part of an elite group, fewer than 100 worldwide, to hold status as a certified hydrogen sulfide master trainer. Additionally, Painter was accepted into the ANSI Z-390 review committee, accepted practices for hydrogen sulfide training programs.

Based in Michigan, Fortis Energy Services has been in operation for more than 10 years and has more than 90 employees who serve customers in the most active oil and shale plays in the United States. The company prides itself on its unceasing commitment to safety. The company recently was named to the Inc. 5000 list of the nation's fastest-growing companies and listed as one of the Top 100 Energy Companies in the nation.

LT Environmental celebrates perfect safety record

LT Environmental Inc., a full service environmental and engineering firm, was recently recognized for its successful safety program. On April 29 the company completed 1,000 days without an Occupational Safety & Health Administration, OSHA, reportable incident. LTE employees celebrated the "1,000 day" milestone with a safety award wall plaque, along with food and commemorative tee-shirts.

Zero work-related injuries and illnesses for a consecutive 1,000 days is exceptional for environmental firms. It takes an ex-

perienced collaborative team to complete multiple projects safely.

"Our safety record of zero incidents is a reflection of our commitment of our employees to do great work safely," said Tom Murphy, president of LT Environmental. "We have built an outstanding safety workplace culture not only to make safety a top priority every day but to support our clients in achieving their safety goals."

Safety is a requirement for all LTE employees. The company develops site-specific health and safety plans for all field work and conducts bi-weekly safety meetings, daily safety tailgate meetings, ongoing safety drills, web-based training for its employees, and more. LTE takes safety even further by promoting fitness and supporting overall personal health of its employees.

"Safety is the most important value at LTE; it's part of our mission statement and part of our corporate culture," said Jeff Citrone, director of health and safety compliance for LT Environmental. "We know that 1,000 days is an important milestone as we continue to lead the path toward safe work environments."

ClearSpan to hold annual photo contest

ClearSpan Fabric Structures, the industry leader in tension fabric buildings, has launched its annual photo contest and is looking for you to submit your amazing ClearSpan building photos.

Whether it's used for sand and salt storage, an indoor riding arena or as a shelter for a stingray tank, send in your photos! This contest is open to all customers, both hobby and commercial, from municipalities to the do-it-yourself mechanic - every ClearSpan customer is encouraged to participate.

To enter, please send in three high-resolution photos to contest@clearspan.com or post them on ClearSpan's Facebook page, www.facebook.com/clearspan, between July 1 and Sept. 30. One grand prize winner will receive a \$500 gift certificate to ClearSpan's affiliate company, FarmTek, where you'll be able to find any accessory you'll need for your fabric structure. There will also be five runner-up awards valued at \$200 each, as well as a handful of honorable mentions that will receive a pair of FarmTek Dot Grip gloves. Good luck capturing your ClearSpan moments!

Univar opens new oil & gas facility in North Dakota

Univar Inc., a leading global chemical distributor of industrial and specialty chemicals and related chemistry services, held a grand opening ceremony June 30 for a new, permanent facility in Dickinson, North Dakota, to support its oil and gas business in the Williston Basin. The ribbon cutting ceremony at the new facility featured remarks by U.S. Sen. Heidi Heitkamp; Chris Oversby, Univar's president of oil and gas and mining; and Dickinson City Commissioner Carson Steiner.

Univar's new 5-acre facility features two warehouses, one

15,000-square-foot facility for general storage and a second, 3,000-square-foot warehouse rated for indoor flammable storage. The facility also includes a truck base and a tank farm. This is Univar's second facility in the Williston Basin. The first, in Williston, was opened in 2011 to serve the north side of the basin.

"We are thrilled to be opening our second permanent facility in the area," said Oversby. "We look forward to bringing new capabilities to our customers in this region, providing technical support and efficiencies directly to the wellsites."

The permanent facility significantly increases Univar's footprint and capabilities in the region enabling the company to deliver essential chemistries to wellsites on time. The opening of the Dickinson facility brings the number of Univar's dedicated oil, gas and mining facilities in the United States to 25.

Percheron hires Gail A. Ridgeway to its team

Percheron announced the addition of Gail A. Ridgeway as the environmental manager for Percheron Field Services. Ridgeway will direct and oversee Percheron's environmental assignments and provide technical assistance, project oversight and strategic guidance on company projects and ventures throughout the nation.

"We are pleased to have Gail join our team. Her extensive experience and expertise in environmental compliance and management will add tremendous value to both Percheron and our clients. Her comprehensive knowledge of project scoping, site analysis and regulatory requirements will greatly support all aspects of our leasing and right of way projects for Percheron Energy and Percheron Field Services," said Alan Wurtz, president of Percheron Field Services.

Prior to joining Percheron, Ridgeway held the environmental manager position for the Florida Rock Division of Vulcan Materials Co. With more than 23 years of experience in major industrial and commercial sectors, she is an accomplished environmental professional, personally involved in all aspects of environmental compliance, land management and permitting projects. Ridgeway holds a B.S. in Biology and Chemistry from Loras College and has received NESHTA's designations for CET, CEP and CEM.

Percheron is the first nationwide integrated land services provider, offering specialized expertise in and, right of way, surveying and environmental services. Percheron's three business units: Energy, Field Services and Survey are committed to the use of cutting edge technology, exceptional client service, and timely and efficient project management.

Percheron opens Bakken regional office

Percheron LLC has opened a regional office in Dickinson, North Dakota. The new office is at 2493 4th Avenue West in Dickinson and will service Percheron's existing client base in the Bakken shale as well as support the continued development of the survey, field services and energy divisions of the company in the region.

"Percheron's move into the Bakken was a natural expansion from our extensive work in shale plays throughout the United States, such as the Marcellus, Utica, Niobrara, Permian and Eagleford. We are excited to be a part of a fast-paced and growing area and look forward to providing a fully integrated service offering to our clients in the area," said Asa Bowers, CEO of Percheron LLC.

Percheron currently has regional offices in Bridgeport, West Virginia; Charlotte, North Carolina; Pittsburgh, Pennsylvania; Odessa, Texas; Houston, Texas; and Denver, Colorado, as well as more than 40 field offices across the U.S. With a network of skilled landmen, right-of-way agents and professional surveyors, Percheron has expertise in all producing states and is able to meet the needs of clients nationwide.

For more information about Percheron visit www.percheron-llc.com.

North Dakota Petroleum Council announces scholarships

The North Dakota Petroleum Council announced the recipients of the 2014 AI Golden Scholarships, which are awarded each year to North Dakota students who are pursuing a post-secondary education in geology, engineering, processing plant technology, science, technology or other careers related to the oil and gas industry. The NDPC increased the number of \$1,000 scholarships available from five last year to nine.

The 2014 AI Golden Scholarship recipients are: Yonis Ibrahim Aliyow who is pursuing a degree in petroleum engineering from the University of North Dakota; Ashley Bohrer, a second year student at Bismarck State College where she is pursuing a degree in chemical engineering; Jaffer Deane, after hearing and reading about the oil boom in North Dakota and the new petroleum engineering program developed at UND, decided to pursue the opportunity and enrolled at UND; William "Billy" Eerdman is a junior attending UND and is majoring in petroleum engineering; Matt Jahner is a student in the petroleum production AAS program at BSC and plans to also work toward a Bachelor of Applied Science degree in energy management; Kristen Lorenz attends North Dakota State University and is a senior working towards a bachelor's degree in geology; Sean Ternes is a junior attending NDSU and majoring in geology; Wade Rath-Wald graduated in May with an Associates in Applied Science degree in process plant technology from BSC and will continue his education at BSC this year to pursue a Bachelor of Science degree in energy management; Ben Munson is a senior in the geology program at NDSU and is also pursuing a second degree in natural resources management.

For information on the North Dakota Petroleum Council Scholarship Fund, visit the Petroleum Council website at www.ndoil.org.

LT Environmental opens Bakken office in North Dakota

LT Environmental Inc., a full-service environmental and engineering firm, has opened its new Bakken Office in Williston, North Dakota.

On July 1 LTE opened its doors and is staffed locally with full-time employees at 10 42nd Street East, No. 1301, Williston, ND, 58801. The new move signifies job growth for the area as well as additional opportunities to support new and existing clients currently operating in the region.

“The steady growth LTE has achieved over the past 22 years, combined with commitment to local service, competitive pricing, and rapid response, has made this move a critical part of our continued expansion plans. Opening an office in the Williston Basin is consistent with our successful business model,” said Tom Murphy, president of LTE. “Our Bakken Office will provide local technical competency and availability to our clients operating in the region.”

LTE is one of the few environmental consulting companies located in Williston. The new location provides a foundation for continued quicker response times to sites in the Williston Basin area. The LTE Bakken office offers experienced consultants in the region providing spill prevention, control and countermeasure and air quality compliance work as well as spill response, site investigation, due diligence, and remediation at oil and gas facilities.

For more information about LTE’s Bakken office, please contact Dan Moir, office manager, at dmoir@ltenv.com or call 701-609-5436. For more information about LTE, please visit www.ltenv.com/ or call 303-433-9788.

NETZSCH receiving 2014 global product leadership award

NETZSCH proudly announced that for the second time since 2011, it will be presented with a highly appreciated, best practices award by Frost & Sullivan, the U.S.-based growth partnership company. In its motivation statement, Frost & Sullivan explained that the 2014 Global Product Leadership Award in Progressing Cavity Pumps for Oil and Gas was issued by evaluating total client experience and strategy implementation excellence using a scorecard, including 10 benchmark criteria for both product leadership and management culture, which has set NETZSCH clearly apart from the other companies in the field.

Frost & Sullivan recognizes that the dynamics within the oil and gas industry are constantly changing. Innovativeness, uniqueness, customer values and matching the needs of the end customers are the key ingredients for success in this highly competitive market. NETZSCH has continuously developed innovative technologies that aid end users with their current challenges. This close look at the customers’ requirements and the benefits that really count for their application has made and kept NETZSCH the world market leader for progressing cavity pumps over the years.

For 60 years, NETZSCH Pumps & Systems has served markets worldwide with its NEMO progressing cavity pumps, TORNADO rotary lobe pumps, grinding machines, barrel-emptying units, dosing technology and accessories, providing customized, so-

phisticated solutions for applications in every type of industry.

Evonne Hickok, FNP-C, now certified with the NRCME

Trinity Community Clinic-Western Dakota provider Evonne Hickok, FNP-C, recently completed all requirements necessary to become certified with the National Registry of Certified Medical Examiners. The NRCME is a list of examiners who have been trained, tested and certified to perform physical examinations for commercial motor vehicle drivers in interstate commerce.

EVONNE HICKOK

Administered by the Department of Transportation and the Federal Motor Carrier Safety Administration, the registry is a program designed to make the nation’s highways safer by requiring that all examiners performing physical examinations comply with training, testing and FMCSA administrative requirements, including refresher training every five years and certification every 10 years. More information on the NRCME can be found at <https://nationalregistry.fmcsa.dot.gov/NRPublicUI/home.seam>.

Hickok recently joined Trinity Community Clinic-Western Dakota in the specialty of occupational health and family medicine.

Hickok works with doctors and other clinic staff to diagnose and treat work-related injuries and illnesses, in addition to providing DOT physicals and other employment screenings. To make an appointment with Evonne Hickok, call 701-572-7711.

Oilfield Improvements Inc. announces new website

Ultra-Flow centralizers

Oilfield Improvements Inc. said that it has a new website for its customers. The website is now mobile web browser compatible and showcases the company’s products.

In addition, users can submit information on the well survey page to request a deviated well analysis right from the website. They can also request a quote, find a distributor, and read about the applications and specifications of each product.

Oilfield Improvements Inc. is family owned and operated and has been in business since 1983. The company manufactures Wheeled Rod Guide® couplings and Ultra-Flow® centralizers and performs computer analysis of well deviation survey to accurately define side loading and drag for optimum tools place-

ment. For more information visit www.rodguides.com.

Jake Gerondale joins Lounsbury & Associates

JAKE GERONDALE

Lounsbury & Associates said that Jake Gerondale, PLS, has joined its team as the vice president of survey and geospatial services. Originally from northern Wisconsin, Gerondale moved to Alaska in 2006 to pursue his surveying career and quickly made the transition from field surveyor to senior management at another firm. His 15 years of surveying experience includes work in both the public and private sector with an emphasis on land and aviation transportation projects. Since joining Lounsbury Gerondale has significantly increased Lounsbury's survey capacity, technical capabilities and led our efforts to open a branch office in Billings, Montana.

Three land surveyors join Lounsbury & Associates team

Lounsbury & Associates said JT Essex, Marshall Hetlet and Brianna Steffler have joined its team.

JT Essex, PLS, is the regional survey manager of Lounsbury & Associates new Billings, Montana, office. Essex manages survey operations in Montana, North Dakota and Wyoming. He has 19 years of experience providing land surveying expertise in boundary, route, engineering design and GPS surveys. His technical background allows him to perform onsite data analysis, which allows real-time decision making, ensuring a high quality product prior to leaving the field and a seamless transition of data from field to office personnel. Essex is licensed to practice in seven western states.

Marshall Hetlet, PLS, has 33 years of experience in the surveying and mapping fields. He began his 12-year career working in the field and has performed all types of surveying tasks throughout the state of Alaska before transitioning into a project management role. He is recognized by his clients and peers as one of the lead right-of-way surveyors in Alaska.

Brianna Steffler, PLS, has a master's degree in geographic information science. In addition to leading all GIS activities for the firm, Steffler will manage surveys for aviation and highway design projects. With more than 13 years of experience, she has a well-rounded background in a variety of surveying and GIS tasks and prides herself on the ability to perform hands-on technical functions of each discipline with competence.

LT Environmental opens new fully staffed ND office

LT Environmental Inc., a full service environmental and engineering firm, said it opened its new fully staffed Bakken office

in Williston, North Dakota, on July 1. The move signifies job growth for the area as well as additional opportunities to support new and existing clients who are currently operating in the region. LTE is currently under contract with 13 operators, nine of which are in the top 35 producers in the Bakken as featured in the Petroleum News Bakken list.

LTE's steady growth over the past 22 years, combined with its commitment to local service, competitive pricing, and rapid response, has made this move a critical part of its successful business model. LTE is one of the few environmental consulting companies located in Williston, North Dakota, which provides local technical competency and availability to our clients operating in the region.

Some of LTE's completed and ongoing projects include regulatory compliance matrices for midstream and production operations oil and saltwater, spill response and coordination, environmental due diligence, air quality permitting, Spill Prevention, Control, and Countermeasure Plan preparation and inspections, stormwater compliance, engineering and inspections; site assessments and closure, remediation and excavation oversight, Naturally Occurring Radioactive Material screening and disposal, biological assessments and Facility Response Plan preparation.

For more information about LTE's Bakken office, please contact Dan Moir, office manager, at dmoir@ltenv.com or call 701-609-5436.

Vertex Rail Technologies plans to produce rail cars

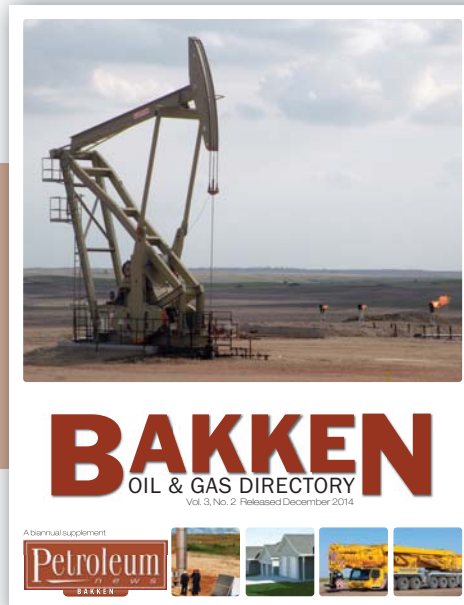

Officials of Vertex Rail Technologies LLC joined North Carolina Gov. Pat McCrory and local leaders Nov. 13 in announcing the company's plan to make railroad tank cars at a site in the City of Wilmington. Vertex will invest \$60 million in upfitting and equipping the site, where it will directly employ 1,342 workers across two shifts. The company has already begun working with Cape Fear Community College and other partners on what will be significant staffing needs. The company's direct hires will include assemblers, fitters, welders and painters.

Behind Vertex's plan is a surging U.S. energy industry. The U.S. is on track to be the world's top petroleum producer by 2020 — ahead of both Russia and Saudi Arabia, according to the Washington, D.C.-based Brookings Institution. "People are trying to pull oil out of the ground at record rates," says Don Croteau, chief executive officer at Vertex. "With that capacity stress, we saw a real market opportunity."

The company will manufacture two product lines in Wilmington: 31,800-gallon general purpose oil tank cars and 3,285 cubic-foot covered "Sandhopper" cars. "Both are used by drillers, refiners and logistics providers in the oil industry," Croteau says. "These cars get us into the marketplace quickly."

Vertex Rail Technologies is a rapidly growing rail car company focused on the need in the energy transportation sector. The company's founders have more than a century of combined experience as industry innovators in the rail and vessel manufacturing, pulling together industry, fabrication, design and manufacturing. For more information about Vertex Rail Technologies visit www.vertexrail.com.

Want to be a part of this oil and gas directory?

Qualified Petroleum News Bakken advertisers have full access to all the benefits included in this biannual magazine to reflect its content and extensive distribution. Those benefits include the following:

- **Exposure.** The Bakken Oil & Gas Directory is distributed twice a year to every Petroleum News Bakken newspaper subscriber, in addition to being displayed at trade shows and conferences.
- **A company profile.** A full page, full color Q&A profile of your company. You'll be involved in the editing and choose the pictures. Once it's printed, you own the piece and you'll receive an electronic copy to use as a company brochure or however you see fit.
- **Access to free news coverage.** Submit announcements, new hires, special projects, new technologies, company photos, and more. Let current and potential new clients keep track of your company's milestones.
- **Unique company listings.** With over 130 categories to choose from, you'll be able to list your company name, contact information and a brief description of the products and services you offer.
- **Additional opportunities** to feature your company and its people – including feature stories, photo spreads, cover shots, and more.

Get listed and be noticed.
