One of thousands of projects using Polyguard RD-6 non-shielding coating. Our first was in 1988.

RD-6

Fastest Coating in the West (or in the Bakken)

Contractors say there is no faster or trouble free girth weld coating system than Polyguard RD-6. On a recent project (12" pipe, FBE mainline coating) a first time crew coated 150 joints on day 1 after training.

On day 2, after adding a driver to the 5 man crew, 201 joints were completed. No coating system has less installation problems than Polyguard RD-6. Ask someone who has installed it.

Dakota Landing's all-inclusive hotel goes above and beyond

Located in the heart of Williston, innovative prototype sets new housing accommodation standard

Q. What is the official name of your company?

A. Dakota Landing

Q. Is your firm a subsidiary or affiliate of other companies? If so, please name those firms and their relationship to your company.

A. No

Q. What do you most want people to know about your company?

A. Williston's premier hotel offering facilities and amenities for corporate stays, groups and extended stay crew stays with full meal plans. Located in the heart of one of the fastest-growing cities in the country, the brand new Dakota Landing residence hotel is designed to

meet the growing needs of the Bakken Shale housing market by providing area visitors and residents, both business travelers and extended stay crews, with high-quality extended-stay housing accommodations that provide guests a welcoming feel within a unique and innovative hotel residence.

The comfortable and value-based hotel residency setting, hosting 240 generously-sized single and double rooms, dining by

a world leader in food service, business services and other lifestyle offerings, provide desirable all-inclusive amenities for the diverse needs of

guests, such as: Food Services, 24 hour food service with hot full American breakfast buffet and multi-entrée dinner; Business Services, dedicated business

center and ATM machine, meeting and conference space for up to 40 persons, free WIFI; Recreational Services, fitness center, poker and pool tables, TV lounge; Convenience Services, laundry services, self-parking with block heater hookups, on-site security, indoor boot room; Area Attractions, situated near the area's historic sites, outdoor recreational opportunities and yearly special events.

Q. Where is your company located?

A. Williston, ND

Q. What year was the company founded and by whom?

A. Opened on September 3, 2013

Q. What is your company's primary business activity?

A. Accommodations and lodging.

QA
AND

COURTESY DAKOTA LANDING

COURTESY DAKOTA LANDING

Q. How many employees does your company have?

A. We currently have 60 employees.

Q. What is your company's main strength or its edge over the competition?

A. The new Bakken Housing Prototype?

OK, so there is no Ritz Carlton in Williston, nor a glamorous shopping and entertainment district but residents – both permanent and temporary – expect to live in a comfortable and healthy environment. One might debate the life-style of a man-camp resident or the challenges of everyday shopping for food, clothing and other essentials, much less the more frivolous whims. In essence though, there are many more economic opportunities in Williston and surrounding communities than in many other cities in the USA and around the world. So everyone makes the most of it, each with a personal goal. City and county officials and staff as well as the business community have common objectives to enhance the economic well-being of their entities and stakeholders.

Shouldn't the working population have similar goals? Wouldn't everyone benefit if the standard of living for everyone was improved. Money is not the stan-

dard of happiness.

Living conditions and other quality of life elements are equally important.

Are man-camps positive environments for motivation and retention? Probably not. Who wouldn't rather stay in a hotel room with amenities and living space plus daily housekeeping, fresh hot and healthy meals available 24 hours a day, fitness, recreation and entertainment areas and a friendly staff of hospitality professionals? And what if there were minimal or no price differentials for these facilities and services versus man-camps?

Part of the solution are the many new apartments being built in the area. These allow for independent living in convenient clusters - great for chefs, tidy and organized individuals but not so much for busy individuals seeking an inclusive price for facilities and services.

And then there is Dakota Landing, Williston's newest hotel and housing solution built specifically for this market. The rooms are spacious, with telephone and WIFI services included. There is daily housekeeping service, a business center and laundry service.

The kitchen produces 24 hour food service including hot full American breakfast buffets and hot, multi-entrée dinner buffets. For those on non-traditional schedules, there is tasty food available any

time.

Add a fitness center, recreation and entertainment rooms, a boot room – necessary for sanity in this muddy environment – and block warmer hook-ups for the colder days in North Dakota. There is a lending library and meeting space for corporate or social meetings up to 40 persons. Most importantly, there is a warm, smiling face at the front desk upon your return every day. The staff members at Dakota Landing are hired for their attitudes and skills. They are genuinely happy to help guests.

Isn't this the new prototype for housing solution in the Bakken.

Q. What new markets, clients or projects will your company attract in the next year?

A. Dakota Landing will become the preferred long-term stay accommodations in the market attracting energy-related companies to provide a better life-style for their employees, and thus drive retention and motivation to become long term residents.

Q. What is the address of your company's Web site?

A. www.dakotalanding.com

COURTESY FORTIS

Completion operation in the Marcellus.

Fortis Energy Service targets major shale plays across U.S. with aggressive growth plan

Safety and quality driven company continues to lead the way throughout life cycle of a well

Q. What is the official name of your company?

A. Fortis Energy Services, Inc.

Q. What do you most want people to know about your company?

A. At Fortis, we invest in our people. We actively recruit, train and retain the best people in the industry. As a result, our customers consistently rate our crews the best-in-class!

Nothing is more important to us than our customers. In response to customer requests, Fortis has developed the distinct capability of bringing an all-encompassing, "turn-key", team to perform your completions and workovers as well as the capability of servicing a well through its entire life cycle. The Fortis Partner Network is comprised of oilfield service providers that are focused on their core competency, have a history of working safely and efficiently with our crews and are the best at what they do. From the point the well is drilled, through its productive life, to plugging, abandonment and restoration, Fortis is your partner in delivering the production phase.

Q. Where is your company located?

A. We are headquartered in Michigan, and offer services throughout the Midwest and Northeastern states including: Michigan, Pennsylvania, West Virginia, Ohio, New York, Indiana, North Dakota and Illinois.

Q. What year was the company founded?

A. The company was founded in 2004 as Arrow Energy Services. In December 2012 the company was acquired and the name was changed to Fortis Energy Services Inc. in April 2013.

Q. What is your company's primary business activity?

A. Fortis Energy Services Inc. is a leading oil and gas service company in the USA specializing in well completions, workovers, down-hole repairs and maintenance, plugging and abandonment and winch truck and hauling services. Quality people and quality work are the principle factors behind our exceptional success rate, efficiency and safety record.

Fortis' well-maintained fleet, combined with our highly experienced professionals and our commitment to service, differentiates us from the competition and has fostered strong customer partnerships.

Our employees take pride in their work and in satisfying all stakeholders. Our experienced professionals allow Fortis to precisely complete difficult projects, effectively reducing our customers' lead time to the production phase.

Q. How many employees does your company have?

A. We currently have 90 employees.

Q. Describe the equipment your company uses and are there any new equipment purchases planned?

A. Our fleet of rigs includes 200 - 500 series workover rigs. Our well maintained fleet is constantly upgraded and operated by highly experienced professionals. We recently added two 500 series rigs to our Utica and Bakken operations.

Q. Is your company expanding any of its operations or locations?

A. Our aggressive growth plan targets all the major shale plays across the US over the next 3-5 years, including the Eagle Ford, Permian and Niobrara basins.

Q. What is your company's main strength or its edge over the competition?

A. Fortis' experienced crews and equipment result in a high degree of efficiency in all of our services. In direct comparison to our competition, The Fortis Team finishes the work in 15-20 percent less time. Consistent with our culture of safety and recruiting programs, our maintenance program nearly eliminates downtime while in the field.

Q. What new markets, clients or projects did your company attract in the last year?

A. Since acquiring the company in December 2012, we have expanded our cus-

QA
AND

Fortis Rig 1065 completing a well in the Utica.

COURTESY FORTIS

New Fortis equipment arriving in the Bakken.

customer base within each of our operating regions and have expanded our footprint to include the Utica and Bakken plays.

Q. What is the most challenging work/contract the company has undertaken?

A. Fortis Energy Services has had the opportunity to work under extreme well pressures in the Marcellus / Utica plays without incident, which is very common in the basins we operate; new wells being drilled have high down-hole pressures. Fortis, along with our partner network, maintain well control and keep a safe op-

eration while completing the well to production. We work safely under pressure

Q. What are the biggest obstacles to completing work your company undertakes?

A. No matter how you look at it, the oil and gas business is a cyclical one. Maintaining a strong cost discipline and striving to be the safest well service provider are always top priorities. It also helps to have a newer fleet and we are fortunate to be situated in some of the most prolific and productive oil and gas producing areas in the country.

Q. What do you see as your company's biggest challenge in the next five years?

A. Managing our growth effectively. Our growth plans are aggressive and to build our service capacity to meet customer demand will challenge us in a good way. We know we will need to invest in the right people and equipment for reaching the next level of growth without sacrificing service quality, safety or efficiency.

Q. What is your company's safety record? What steps does the company take to ensure a safe work environment?

A. At Fortis we have built a culture of safety. "Safety First" is one of our core values. Our focus on continuous improvement of safety in all areas of operations, as well as the health and safety of our employees and customers is our highest priority. Safety is an integral part of our quality service and is at the core of everything that we do. Our culture of safety begins with management and permeates throughout the organization. Effective training and work practices are continuously reinforced, resulting in an injury free workplace. Our employees receive extensive training through our award-winning safety program which includes: Zero tolerance program; Employee certification with OSHA 10, Well Control, H2S; Monthly on-site training; Operator certification for all on-site equipment, first aid and CPR.

Q. Has your company been involved in any community projects or charity events?

A. At Fortis we actively support corporate responsibility. All Fortis employees are encouraged to volunteer in an activity of their choice. Fortis employees give back to the community in many ways, from fundraisers for charities to the annual adopt-a-highway program. At Fortis we believe that small actions can make a big difference and that everyone has something to contribute. Our employees dedicate their time and energy to several charitable organizations within the communities where Fortis operates.

Q. What is the address of your company's Web site?

A. fortisenergyservices.com

Lynden family of companies' offering exceptional service and solutions

Company has been revolutionizing freight transportation for more than 100 years

COURTESY LYNDEN

COURTESY LYNDEN

Lynden's wide variety of trailers and equipment allow oil and gas customers to move almost any type of drilling equipment, camp modules or other supplies.

Q. What do you most want people to know about your company?

A. Lynden is a family of transportation and logistics companies built around a common goal: to develop mutually beneficial relationships with our client partners. We believe that complex transportation problems can be solved in the hands of the right people with the right tools and the right experience.

Q. Where is your company located?

A. While most of the Lynden companies call Alaska and the Pacific Northwest home, the reach of our services and offices extends around the globe. Headquarters is located in Anchorage.

Q. What year was the company founded and by whom?

A. Lynden Transfer was founded in 1906 by Ed Austin in Lynden, WA. Henry Jansen and two partners purchased Lynden Transfer from Ed Austin's widow in 1947. Lynden pioneered truck delivery to Alaska from the Lower 48 in the 1950s and is still considered the most knowledgeable and experienced in the Alaska market.

Q. What is the company's primary business sector?

A. The Lynden family of companies offers multi-modal transportation over land, sea and air, freight forwarding, logistics and 3PL services. Our array of transportation choices allow customers to only pay

for the speed they need to meet their unique requirements. Lynden has built a reputation of superior service to diverse industries including oil and gas, mining, construction, retail and manufacturing.

Q. Where does your company do business?

A. Lynden provides transportation and logistics services to from and within Alaska, the contiguous United States and offshore locations such as Hawaii, Puerto Rico, Russia, Canada, Mexico and Papua New Guinea as well as locations around the globe.

Q. Are there important projects the company is currently a part of or has done recently?

A. We provide transportation services to support development of the Bakken Oil Field Reserve in North Dakota and we provided air transportation and logistics to develop a natural gas pipeline in Papua New Guinea. We also support ongoing major oil and gas development projects in Alaska and Russia.

Q. How many employees does your company have?

A. We have 2,500 employees with an average length of service of approximately 10 years.

Q. Describe the equipment your company might use and are there any new purchases planned?

A. Lynden has a wide variety of equipment specialized to fit any transportation needs, including tractors and trailers for oversize freight, tanker trailers for hauling chemicals or other sensitive liquids, hovercraft, shallow-draft barges for landing in remote areas, barges, air charters, refrigerated trailers and much more. All of our equipment is equipped to meet new emission standards and 90 percent is less than 5 years old. These newer more efficient tractors and ultra-efficient diesel engines have dramatically improved fuel economy and reduced air emissions.

Q. Is your company expanding any of its operations or locations?

A. In response to customer and industry demand in the Bakken Oil Field Reserve, Lynden added scheduled Less-than-Truckload (LTL) service to North Dakota and Oklahoma two years ago. Lynden Transport trucks depart twice weekly from Houston, Dallas, Oklahoma City and Tulsa bound for Williston, ND and points in Canada and Alaska. The service changes were made to give customers more choices with departures and arrivals in this very active market. Lynden has extensive experience moving equipment, supplies, and oversized freight in support of the oil industry in Texas, Alaska and Canada and is putting this expertise to use to support the development of the Bakken Oil Fields. Last year, Lynden created a new company Lynden Air Cargo (PNG) Ltd., to serve customers in Papua New Guinea and also opened a new service center in Brussels,

Q AND

Belgium. We continually look for areas where we can expand Lynden's operations to better serve our customers in their efforts.

Q. What is your company's main strength or its edge over the competition in serving the oil industry?

A. Lynden has an extensive history supporting the gas and oil industry. From the trans-Alaska pipeline construction in the 1970s to today's global oil field operations and exploration, we have built strong and lasting partnerships with customers to help them succeed in this industry. We transport complete drill rigs, camp modules, equipment and supplies and handle complex logistics for the top companies in the business - all played out in some of the toughest environments in the world. We've spent decades hauling oversized freight to the Prudhoe Bay and Kenai oilfields of Alaska and now we are serving customers who are developing the Bakken Oil Patch. Compressors, heaters... we haul it north from points in the U.S. or south from Canadian Lynden Transport in Edmonton to Williston, ND and other areas where supplies and equipment are needed. With a variety of intermodal options, we have the expertise, experience, infrastructure and people to handle anything customers need shipped, trucked or flown onshore or offshore. Lynden delivers a total freight transportation package through more than 15 companies; over land, on the water, in the air - or in any combination.

Q. What are the biggest obstacles to completing work the company undertakes?

A. We understand the challenges and serious nature of handling oil and hazardous substances safely and in an environmentally responsible manner. We also understand the permitting and special requirements of moving heavy haul and oversize loads cross-country or internationally. The harsh weather and remote locations of Alaska, Russia and Western Canada and other work sites pose challenges for both people and equipment. International documentation and restrictions are often obstacles to overcome depending on the nature of the project and the location. We pride ourselves on brainstorming innovative solutions to any problem and getting the job done on time and within budget.

COURTESY LYNDEN

Lynden has extensive experience coordinating and moving freight to support the oil industry in Texas, Canada and Alaska and is putting that expertise to use supporting the development of the Bakken Oil Fields.

Q. What is your company's safety record?

A. Lynden has a long history of operating safely and responsibly in sensitive and challenging environments. We pride ourselves on our impeccable safety record and continue to strive for zero accidents.

Q. What steps does the company take to ensure a green work environment?

A. Our culture of innovation and efficiency is completely in harmony with our commitment to protect the environment. Lynden's people, equipment, processes and technology are focused on the efficient use of resources and sustainable operations. Procedures are in place to prevent and react to accidental spills and manage storm water pollution. Materials that are harmful to the environment are stored and handled properly. Spent engine oil, antifreeze, solvent cleaners and batteries are recovered and recycled. We developed trip software to make sure our deliveries are the most efficient they can be with a minimum of idling and fuel consumption. Lynden was founded on principles of integrity and quality and our environmental commitment is based on a common-sense desire to do things right.

Q. Have you received any awards for your efforts?

A. We receive environmental and performance recognition year after year. Just this fall, Alaska West Express became the

fourth Lynden company to join the EPA's SmartWay Transportation Partnership and Lynden Transport was voted No. 1 for on-time service in the annual Quest for Quality Awards. Our companies are continually recognized for environmental excellence and efficient operations. We were the first trucking company to earn the Green Star Award for Alaskan businesses and we have also been named to Inbound Logistics' Green Supply Chain Partners list and the Top 3PL list year after year. Lynden is a repeat winner in the annual Quest for Quality customer service awards presented by Logistics Management magazine.

Q. Has your company been involved in any community projects or charities events?

A. From sponsoring national events for cancer research to donating the transportation of a sport court for a youth camp in rural Alaska, Lynden gives back in the communities where it does business. In locations all over the world, Lynden employees volunteer for charities and the companies contribute financially and with in-kind services to a variety of worthy causes. In Alaska, Lynden sponsors the Jr. Iditarod each year as well as sponsoring mushers and their dog teams for the annual Iditarod sled dog race.

Q. Does your company have a website?

A. Yes, www.lynden.com.

McAda Fluids Heating Services above the rest with patented Heating On-The-Fly®

Company exceeds in service with largest inventory of fluids heating units and technology

Q. What is the official name of your company?

A. McAda Fluids Heating Services

Q. Is your firm a subsidiary or affiliate of other companies?

A. We are a subsidiary of McAda Drilling Fluids, Inc.

Q. What do you most want people to know about your company?

A. We now service the Bakken Shale area.

Q. Where is your company located?

A. Fort Lupton, CO

Q. What year was the company founded?

A. McAda Drilling Fluids, Inc. was founded in 1989 and McAda Fluids Heating Services in 2004.

Q. What is your company's primary business activity?

A. Frac Fluids Heating.

Q. Are there important projects the company is currently a part of or has done recently?

A. We are now available to work for customers in the Bakken Shale.

Q. How many employees does your company have?

A. We currently have 175 employees.

Q. Describe the equipment your company uses.

A. We are the largest supplier of frac fluids heating units in the industry with 1.6 Billion BTU's of heating capacity.

Q. Is your company expanding any of its operations or locations?

A. Yes, Our new Colorado location enables us to services all the Rockies and

mid-continent areas including the Bakken Shale.

Q. Is the company changing any of its services or products?

A. We have the largest number of frac fluids heating units in the industry and

we are a licensee for the patented method of Heating On-The-Fly®. Just as other materials are added to frac fluids on the fly, we heat the fluids while they are being pumped from the water source to the frac fluid pumping equipment or the frac water

storage tanks located at the well site at the volumes and flow rates needed for well completion.

This process usually involves one or more of our units positioned in line between the water source and the frac water storage tanks located on the well site that is being frac'ed. The total volume per minute needed is pumped thru the units and heated to the customer's desired temperature, or a portion of the unheated fluids are taken out of the total flow to the frac tanks, called split-streaming, heated, and then returned to the flow line. Once heated, the fluids are either pumped directly to the pump trucks or transferred into holding tanks at the location prior to being pumped down-hole by the frac service provider.

McAda Fluids Heating Services is an industry leader in using this methodology to heat frac fluids because of the size of our units. Smaller BTU rated units cannot provide the desired temperature rise in the flow line from the water source to the frac site.

Q. What is your company's main strength or its edge over the competition?

A. McAda Fluids Fluids Heating Service continually invests in additional frac fluids heating technology to ensure that our current inventory of equipment will meet the industry's need for high-volume,

COURTESY SANFORD SCHULWOLF, WWW.SANFORDPHOTO.COM

COURTESY SANFORD SCHULWOLE, WWW.SANFORDPHOTO.COM

on demand fluids heating services. We've built an inventory of modern, specially designed equipment, and have 16MM BTU, 21MM BTU, as well as 35MM BTU units. As a result of our inventory and HOTF license, we are equipped to handle any size job.

Q. What new markets, clients or projects did your company attract in the last year?

A. We have had a positive response from our customers in the Niobrara Shale when we moved into Colorado last winter.

Q. What is the most challenging work/contract the company has undertaken?

A. Heating a +40 mile above ground water transfer system along with multiple frac water storage ponds during the win-

ter in Pennsylvania. We successfully met the challenge and learned important aspects of running such a large job.

Q. What are the biggest obstacles to completing work your company undertakes?

A. The uncertainty of the weather.

Q. What do you see as your company's biggest challenge in the next five years?

A. Keeping up with the worldwide demand for our equipment and services and Shale exploration projects are developed in other areas of North America and around the world.

Q. Does your company have an anniversary or other landmark event coming up?

A. In 2014 McAda Drilling Fluids will be celebrating its 25th anniversary. We

also should exceed 2.0 Billion BTU's of heating capacity in 2014.

Q. What is your company's safety record? What steps does the company take to ensure a safe work environment?

A. We were just awarded top 200 of 52,000 insured for our great safety record in workmen's comp coverage from Texas Mutual and strive to provide our employees with a safe, stable working environment by preventing the occurrence of accidents and injuries.

In addition, we operate with a high level of awareness of the environment and we go to great lengths to provide environmentally responsible equipment.

Q. What is the address of your company's Web site?

A. McAda Fluids Heating Services - www.mcadafluidsheating.com

Polyguard Products Inc. an Innovation Driven Company

Company's patented technology has successfully protected pipelines from corrosion for more than 50 years

Q. What is the official name of your company?

A. Polyguard Products, Inc.

Q. What do you most want people to know about your company?

A. Polyguard has made pipeline corrosion coatings since 1950. We are a 100 percent employee owned company, and most products we sell are products which we invented rather than copied from competitor's products.

Q. Where is your company located?

A. Ennis, TX.

Q. What year was the company founded and by whom?

A. In 1950 by Robert M. Nee and Frank McNulty.

Q. What is your company's primary business activity?

A. Manufacture of corrosion coatings and waterproofing. Polyguard's Pipeline Division has been active in the pipeline protective coating industry for more than 50 years. This division has designed, manufactured, and introduced a number of innovative underground pipeline coatings and girth weld coatings, which have become commercially accepted as standards for the industry. They are both non-shielding coatings and soil stress tolerant.

Q. Are there important projects the company is currently a part of or has done recently?

A. Lots of them however, many oil companies don't like to have their name publicized, and we can't list them. We are in the process of helping one oil company stop corrosion on many, many miles of pipe. We solved a major corrosion problem down-hole in thousands of oil wells saving several oil companies MANY millions of dollars; that's the type of innovative products we are capable of bringing to market to solve problems.

Q AND

Girth weld application of Polyguard RD-6 on a miles and miles of pipe.

Q. How many employees does your company have?

A. We currently have 110 employees.

Q. Describe the equipment your company uses and is there any new equipment purchases planned?

A. We are in our 21st successive year of sales growth, so we are always expanding, updating, and improving our manufacturing and laboratory capabilities.

Q. Is your company expanding any of

its operations or locations?

A. In the last 3 years we have added 1 million gallons of raw material storage.

Q. Is the company changing any of its services or products?

A. Not so much changing as introducing new, such as the two part epoxy we introduced in 2012, several insulation vapor proofing, weatherproofing, and cladding products for commercial and industrial insulation. Our Architectural division is growing in a very difficult time for the construction industry; this is due again to innovative new products.

COURTESY POLYGUARD PRODUCTS INC.

Polyguard RD-6 applied during a rehabilitation job.

Q. What is your company's main strength or its edge over the competition?

A. Innovation — we have always had more technical people than sales people. Our original product line, corrosion coatings for steel pipelines, remains strong and growing today.

In 1970 Polyguard introduced architectural waterproofing membranes. In 2002 Polyguard introduced RG-2400® anti-corrosion gel, an innovative patented technology which successfully solves the problem of corrosion under insulation.

In 2003 Polyguard launched the Underseal® system to offer protection against termites, pests, radon gas, moisture, insecticides/pesticides as well as provide waterproofing and crack reduc-

tion in concrete structures.

Polyguard's highway waterproofing membranes, introduced in the early 1970's, have been specified by most major DOT's for use on pavement and bridges.

With our ISO 9001 certification, Polyguard is committed to maintaining a high level of quality in both product manufacture and product development.

Q. What new markets, clients or projects did your company attract in the last year?

A. We are now growing rapidly internationally, including Canada. We have also become the primary products used on ammonia refrigeration systems.

Q. What is the most challenging

work/contract the company has undertaken?

A. Waterproofing the Ballpark at Arlington. Solving the downhole corrosion issues.

Q. What are the biggest obstacles to completing work your company undertakes?

A. We do nothing but manufacture, so the answer to that would be R&D and new product development and introduction.

Q. What do you see as your company's biggest challenge in the next five years?

A. Making the transition from being a good small company to a good large company.

Q. What is the average length of time employee's work for the company?

A. They tend to stay a long time because their Employee Stock Ownership (a retirement plan) keeps getting bigger.

Q. What is your company's safety record? What steps does the company take to ensure a safe work environment?

A. We have implemented the DuPont "STOP" safety program, which is raising awareness.

Q. What is the address of your company's Web site?

A.
<http://www.polyguardproducts.com>

COURTESY POLYGUARD PRODUCTS INC.

Installation of Polyguard RD-6 on a girth weld.

Spartan is your one stop source for engineering services

Award winning company continually expands its capabilities to meet client needs

Q. What is the official name of your company?

A. Spartan Engineering Inc.

Q. What do you most want people to know about your company?

A. Spartan provides engineering, design, mapping, construction management, inspection and other services to oil and gas companies, allowing a one-stop shop to design and build both facilities and pipeline projects.

Q. Where is your company located?

A. Our corporate office is located in Tulsa, Oklahoma. Spartan has team members working in Oklahoma City, OK, Denver, CO and Minot, ND.

Q. What year was the company founded and by whom?

A. Wayne Lagorin established Spartan Engineering in January 2010. Lagorin is a native of Kenmare, ND. He received a degree from North Dakota State University as a petroleum engineer. Lagorin's experience over the last 20 years includes building pipelines, truck unloading facilities, gas storage facilities, compression and pump stations, terminals and other facility projects. He has held titles of regional director and director of engineer-

ing with some of the leading engineering firms in the industry, and currently serves as president of Spartan.

Q. What is your company's primary business activity?

A. Engineering and designing oil and gas facilities and pipelines

UPSTREAM: wellhead facilities, separation, dehydration, heater/treater, launcher/receiver, gathering systems, process studies; MID-STREAM: cross county pipelines, compressor stations, pump stations, terminals & storage, metering facilities, gas dehydration, gas sweetening, power generation, pipeline rehabilitation, SCADA, fiber optics; DOWNSTREAM: gas processing, fractionation, refining, chemical plant, distribution systems.

Q. Are there important projects the company is currently a part of or has done recently?

A. NGL pipelines totaling approximately 1,050 miles, connecting the Bakken Oil Field in North Dakota to Mont Belvieu, Texas. The Spartan Instrumentation & Electrical team has recently completed work on a gas plant near Watford City, ND.

Q. How many employees does your company have?

A. We have 86 professionals and growing.

Q. Describe the equipment your company uses and are there any new equipment purchases planned?

A. The software and equipment that Spartan uses are state-of-the-art and Spartan has also developed in-house software to provide our customers with the best information available to manage the engineering and construction projects. Some of these include: Meraki, Ajera - Project Accounting Software, Primavera P6 and Risk Management, TILOS, STAAD.Pro, Hysys, VMGSim, CADWorx, Caesar II, ETAP, Compress, Pipeline Progress Management System (PPMS), Dynamic Pipeline Estimating Software (DPES), AutoCAD Civil 3D & ESRI ArcInfo, Skyline, Lightning, Global Mapper, New Century Software, Bentley.

Q. Is your company expanding any of its operations or locations?

A. Spartan is planning on opening a Denver office.

Q. Is the company changing any of its services or products?

A. Spartan is continually expanding services, such as developing our new pipeline estimating tool, Dynamic Pipeline Estimating Software (DPES) and

QA
AND

Pipeline Progress Management System (PPMS), which is a collaborative tool for pipeline projects, and lightning software for GIS mapping.

Q. What is your company's main strength or its edge over the competition?

A. We believe that by creating a work environment that focuses on respect, teamwork, open communication, and a "can do" work ethic 24 hours a day, seven days a week, we provide our clients and our employees with the greatest opportunity for success. The Spartan leadership and staff have a well-established industry history of performance and integrity. Combined, our team has literally centuries of experience in all facets of engineering for mainline and facility projects. Spartan Engineering focuses on mid-stream and downstream components of the petroleum industry, wind generation, and fiber communication. Our ties to industry leaders across the nation provide us with tremendous resources that help us deliver your project successfully. Currently, our team is working in several states, including Colorado, Wyoming, Montana, North Dakota, Texas and Oklahoma on pipeline and facility projects.

Q. What new markets, clients or projects did your company attract in the last year?

A. Spartan has been working on gathering systems, gas plants, transmission NGL pipelines, gas compression, gas processing, skid design and many facility and pipeline projects.

Q. What is the most challenging work/contract the company has undertaken?

A. Several projects in their own way have been exciting to see develop, such as the building of a large diameter butane sphere, two NGL pipeline projects simultaneously with a total of approximately 1050 miles, and the I&E work on a gas plant project.

Q. What are the biggest obstacles to completing work your company undertakes?

A. Each project seems to have its own biggest obstacle, with the following issues

coming to mind; effective communication to ensure goals and objectives are aligned; vendor manufacturing drawings and schedules to meet client expectations on deliveries of equipment and materials; permit and regulatory schedules.

Q. What do you see as your company's biggest challenge in the next five years?

A. Attracting and maintaining top industry talent by aligning constant work flow to allow for job continuity and salary requirements.

Q. Does your company have an anniversary or other landmark event coming up?

A. Spartan will be 4 years old in January of 2014.

Q. What is your company's safety record? What steps does the company take to ensure a safe work environment?

A. Spartan has never had a safety incident. We have monthly training on safety topics and have a continuous attitude toward maintaining safety at the workplace and in our designs.

Q. Has your company been involved in any community projects or charity events?

A. Spartan has taken part in and sponsored many industry events such as: Pipeliners Clay Shoot in Houston, TX as well as Tulsa, OK, Goose Fest in Kenmare, ND, Crawfish Boil, Tulsa Area United Way Golf Tournament, in Tulsa, OK, and many others.

Q. Have you received any industry awards or recognition?

A. Yes, Spartan is very proud of our "2012 Engineering Company of the Year Award" from the Rocky Mountain Oil and Gas Awards. It was a great honor to have the Oil and Gas Awards recognize our team for their continuous efforts and hard work.

The Oil and Gas Awards have recently announced that Spartan Engineering is a finalist for the "2013 Midcontinent Oil and Gas Award". The awards ceremony will be held in Oklahoma City, OK. We are very pleased and honored to sit amongst the other 54 nominated companies.

Q. What is the address of your company's Web site?

A. www.spartan-eng.com

Active companies

Attention readers: The following upstream Exploration & Production listings include well operators in North Dakota and Montana that produce at least 500 barrels of oil per day from the Bakken petroleum system, which has a number of geological zones, including Three Forks. One significant Williston Basin Canada operator, Lightstream Resources, is listed, but without daily production because Saskatchewan does not report Bakken well output.

The only non-operators listed in this section are Northern Oil and Gas and PetroShale because of the size of their investments and their involvement in their partners' operations. The Bakken Oil & Gas Directory is essentially a marketing tool for regular advertisers in Petroleum News Bakken — a value-added product, per se. But it is also meant to be of use to Petroleum News Bakken readers, so oil and gas companies, the heart of the activity in any oil province, are listed in the directory under Exploration & Production Companies, whether or not they are regular advertisers in the newspaper.

Associations and government offices involved in the Williston Basin's Bakken are also listed, whether or not they advertise, as a service to Petroleum News Bakken readers, all of whom receive a copy of this directory.

The production numbers included in the directory are from October — the latest month reported to the states of North Dakota and Montana by most of the companies — and exclude production from wells on confidential status. The information comes directly from Petroleum News Bakken's analysis of information released by the North Dakota Industrial Commission and the Montana Board of Oil & Gas Conservation Commission.

Production from Northern Oil and Gas and PetroShale is not listed because they do not operate any wells and so the aforementioned state agencies do not collect production information from them. Both companies' websites, however, are listed herein. It is possible production information (or contacts for more information) is listed on those sites.

All corrections and suggestions should be sent to me, Kay Cashman, via email at publisher@petroleumnewsbakken.com.

Want to be a part of this oil and gas directory?

Qualified Petroleum News Bakken advertisers have full access to all the benefits included in this biannual magazine to reflect its content and extensive distribution. Those benefits include the following:

- **Exposure.** The Bakken Oil & Gas Directory is distributed twice a year to every Petroleum News Bakken newspaper subscriber, in addition to being displayed at trade shows and conferences.
- **A company profile.** A full page, full color Q&A profile of your company. You'll be involved in the editing and choose the pictures. Once it's printed, you own the piece and you'll receive an electronic copy to use as a company brochure or however you see fit.
- **Access to free news coverage.** Submit announcements, new hires, special projects, new technologies, company photos, and more. Let current and potential new clients keep track of your company's milestones.
- **Unique company listings.** With over 130 categories to choose from, you'll be able to list your company name, contact information and a brief description of the products and services you offer.
- **Additional opportunities** to feature your company and its people – including feature stories, photo spreads, cover shots, and more.

Get listed and be noticed.

COMPANY NEWS *in brief*

Larson Electronics releases instant ON security light

Larson Electronics Magnalight said March 20 that it has released the WAL-TSL-300W-LED LED tower security light. Modeled after the successful metal halide light series, the LED version of this amiable security light features “instant on” and hot restrike capabilities.

Designed to deliver all the power of its 1500 watt metal halide sibling, this 300 watt LED security light continues to offer the operator the ability to easily pan and tilt the light beam as needed. The light is mounted to the top of a wall or tower deck and operators in prisons or military installations can use the light to identify issues up to 1000 feet away. While the metal halide models had to “warm up,” these LED lights are on immediately when the light is energized. Until now, only high wattage incandescent turned on instantly, however, those bulbs get very hot and require constant replacement. The WAL-TSL-300W-LED tower security light is a modern alternative that produces light that exceeds the output of metal halide in distance, color correctness, intensity and longevity. For more information visit www.Magnalight.com.

Larson releases lumen light tower with pneumatic mast

Larson Electronics said March 29 that it has added to its extensive range of industrial grade lighting equipment with the newly announced release of a metal halide light tower that features 330,000 lumen light output combined with pneumatic tower operation. Built to provide a high power lighting solution that requires minimal setup time or effort, the PLM-18-3X1000W Pneumatic Light Tower provides operators with an ideal lighting solution that features air powered tower extension and 3,000 watts of metal halide lighting.

The Larson Electronics PLM-18-3X1000W Pneumatic Light Tower offers operators a powerful yet easy to deploy lighting system that takes the work out of producing large scale site illumination. This powerful lighting system is designed to withstand the demanding conditions found on industrial and commercial work sites and as result can effectively serve in a wide variety of applications from road construction to event lighting. This is a high output tower system that provides 330,000 lumens of illumination capable of covering three-plus acres with bright white light in a wide flood pattern. The three metal halide lamps on this tower offer efficient operation and good contrasting and color rendering, making them ideal for work sites where revealing fine details and performing close work is critical to job performance.

Business Spotlight: Trinity Health Occupational Medicine

HOWARD REEVE, MD

Trinity Health's Occupational Medicine program offers an extensive range of pre-employment and occupational medical services in nine locations across north-central and northwest North Dakota. These services promote a safe work environment to reduce injuries and workers' compensation claims. Services include DOT and non-DOT physicals, drug and alcohol screenings, respirator clearance, physical fitness work screens, and vision and hearing testing.

Howard Reeve, MD

Dr. Reeve has been a physician at Trinity Health since 1989. He specializes in occupational medicine, family medicine and geriatrics at the Trinity Health Medical Arts Clinic in Minot. Originally from Minot, N.D., Reeve has been practicing occupational medicine for more than 20 years. Reeve is also a pilot, one of the few certified in the state to conduct FAA flight physicals.

Spartan Engineering awarded 2012 engineering company

Spartan Engineering Inc., a full-service engineering company with offices in Tulsa, Okla., Denver, Colo., and Minot, N.D., said April 3 that it was honored as the Engineering Company of the year during the first ever Rocky Mountain Oil and Gas Awards gala held in Denver on March 12.

Spartan was among 19 companies and individuals recognized by the Oil and Gas Awards for excellence and achievement within the oil and gas industry serving the Rocky Mountain region.

“We are honored to have been selected to receive this recognition from the Rocky Mountain Oil and Gas Awards. It truly is the result of hard work and an excellent team that works together every day to meet our customers' expectations,” said Spartan President Wayne Lagorin.

This is the inaugural year for the Oil and Gas Awards, which are designed to give recognition to those individuals and companies in the upstream and midstream sectors of the oil and gas industry for their contributions and efforts in corporate social

BEKKI GRANT

NICHOLAS GRANT

HAYLEE CRIPE

ASHLEY SUMMERS

Ebeltoft . Sickler . Lawyers consists of nine lawyers serving Bakken-based businesses in North Dakota and Montana. Practice groups provide legal expertise in the areas of: corporate due-diligence, merger, acquisition and business sale negotiation and completion, and leasing, purchase or sale of real estate and developer contracts, appearances for planning and zoning and litigation relating to governmental decisions, environmental claims litigation.

Randall Sickler, Vice President and Managing Partner

Randall Sickler has focused his practice on imaginative business planning and is skilled in representing businesses in litigation and alternative resolution techniques. He has a depth of experience in business arbitration, construction litigation, environmental and natural resources lawsuits and contract disputes. He also has an interest in creditors' rights, regularly representing mortgage and finance companies, banks and other businesses in the collection of debts.

Paul Ebeltoft, President

Paul Ebeltoft is an experienced trial lawyer who concentrates his practice in litigation and alternatives to litigation. Also a mediator and arbitrator, Ebeltoft is skilled in customizing mediation

techniques to a variety of litigation settings. His professional awards include: "AV" rating by Martindale-Hubbell®, inclusion in The Best Lawyers in America® and selected a Super Lawyer in civil and personal injury litigation.

Jennifer Grosz, Treasurer

Jennifer Grosz focuses her practice on business transactions, personal planning and real estate transactions. Grosz has a particular interest in business sales and due diligence. She is highly regarded for aiding businesses in navigating this stressful and time intensive process. She strives to provide businesses usable and sustainable ideas to meet challenges of the environment in which they operate.

Nathan Bouray, Secretary

Nathan Bouray focuses his practice on real estate, oil and gas, and probate matters. With the current level of oil and gas activity in western North Dakota, Bouray spends his days assisting clients in all aspects of mineral development, from acquisition, due diligence, leasing, title review and production.

Courtney Olson, Associate Lawyer

At Ebeltoft . Sickler . Lawyers, associate lawyer Courtney Olson concentrates her practice within the Litigation Solutions Team, where she focuses on civil litigation. She also assists with managing the firm's criminal prosecution contracts, as well as aiding clients with collection, guardianship, eviction, and adoption matters.

Bekki Grant, Associate Lawyer

Lawyer Bekki Grant spent her first two years in private practice in Missoula, Mont., where her work consisted of criminal defense work, workers' compensation matters and plaintiff's litigation. At Ebeltoft . Sickler . Lawyers, Grant concentrates her practice within the organizational consultants, real estate and mineral and environmental, and personal planning practice areas and manages the firm's criminal prosecution contracts.

Nicholas Grant, Associate Lawyer

At Ebeltoft . Sickler . Lawyers, Lawyer Nicholas Grant works exclusively in the firm's litigation solutions and real estate, environmental, oil and gas litigation practice groups. Nicholas represents a diverse group of clients in both state and federal court on matters including insurance defense, construction defect, and other litigation.

Haylee Cripe, Associate Lawyer

Lawyer Haylee Cripe is a graduate of the University of North Dakota School of Law. At Ebeltoft . Sickler . Lawyers, Cripe's Bachelor of Accountancy has proven to be an invaluable asset in advising clients in the practice areas of business solutions and personal planning. Additionally, Cripe's education and experience allows her to spot legal and business issues for clients.

Larson Electronics new LED light with trunnion mount

Larson Electronics, a leader in the manufacture and distribution of high grade industrial light products, said April 8 that it has released a powerful LED area light designed to provide an easily mounted and adjusted source of explosion proof rated illumination. The HBLP-1MLED-TRN trunnion mount light fixture is approved for Class 1 Division 1 & 2 locations and features the power, durability and efficiency of LED technology coupled with an easy to install trunnion mount for adjustable positioning.

The HBLP-1MLED-TRN explosion proof trunnion mount light fixture offers operators in hazardous locations a powerful, efficient and more durable alternative to older and less effective fluorescent or metal halide lighting systems. This explosion proof approved fixture features a 16-inch round aluminum housing body that has been designed for excellent heat dissipation and durability and an aluminum trunnion mount that makes mounting and placement simple and adjustable. This LED area light draws only 150 watts of power, yet produces 10,000 lumens of light output in a wide flood pattern that is ideal for illuminating work areas, warehouse space, processing lines and anywhere large scale illumination is needed. For more information visit www.Larsonelectronics.com.

Attorneys Grant and Olson present policies at SAHRA

Ebeltoft . Sickler. Lawyers said April 5 that Attorneys Bekki Grant and Courtney Olson recently gave a presentation to the Southwest Area Human Resources Association on the issue of age discrimination in the workplace. The Southwest Area Human Resources Associa-

tion is an affiliate of the Society for Human Resource Management. The Society for Human Resource Management is the world's largest association devoted to human resource management.

Attorneys Grant and Olson's presentation covered federal and state regulations on age discrimination, including the Age Discrimination in Employment Act of 1967 and the North Dakota Human Rights Act. They also touched on safeguarding employment practices from age discrimination by adopting protective policies, impact monitoring and education. The presentation concluded with an interactive session in which audience members were asked to work through a potential age discrimination scenario.

Larson releases 3000 watt metal halide mini-light tower

Larson Electronics' said April 15 that it has released a mini light tower equipped with an onboard generator and 3,000 watts of metal halide lighting fitted to an adjustable tower assembly. The WAL-ML-3XM-3G 3000 watt mini light tower is a powerful yet fully portable lighting system that allows operators to illuminate more than three acres effectively without the need for external power sources or dedicated towing packages.

The WAL-ML-3XM-3G mini light tower provides operators with a powerful and easily transported lighting system that offers the power of a full size lighting system in a compact and self powered package. This mini light tower features big output from a small size with three 1,000 watt metal halide lamps powered by a single generator producing over 3200 VA, and an adjustable light tower boom that can be elevated up to 12 feet in height. This unit produces 330,000 lumens of intense light output in a large flood pattern, and when elevated to its full 12 foot height can illuminate three acres of work or event area effectively. The tower and base assembly is constructed of powder coated steel for durability and high strength, and the extendable light tower is raised or lowered using an included hand winch for easy deployment.

For more information visit www.Larsonelectronics.com.

Larson adds two panel power distribution system

Larson Electronics Magnalight said April 19 that it has released the MGS-DC-30K-150-2X480W-16X120-2X240 power distribution system, featuring a three phase panel, equipped with a 480 Volt panel with receptacles and a single phase 120/240 panel on the secondary side with 120 and 240 volt outlets.

The primary side has 150 amp panel supporting two 60 amp 480 volt welding receptacles and the 30 KVA transformer. On the secondary side of the transformer, a 120/204 panel supports 16 GFCI 120 volt receptacles and two 240 Volt receptacles. The entire power distribution system is mounted on a powder coated steel cart with skid pockets and top pick eye.

"This power distribution system gives the operators the abil-

ity to run 3 phase welders and single phase grinders and lights, making it a universal power distribution panel application,” said Rob Bresnahan with Magnalight.com.

Larson Electronics Magnalight builds a wide variety of power distribution panel systems for industrial, military and offshore applications. For more information go to Magnalight.com or contact 1-800-369-6671 (1-903-498-3363 international) or email sales@magnalight.com.

Larson releases rechargeable pistol grip spotlight

Larson Electronics said April 29 that it has released a powerful new pistol grip spotlight that provides brilliant green light output in a rugged and portable design. The HL-85-3W1-GREEN Green LED handheld spotlight features a high strength weather and UV resistant housing, tool free servicing, inline dimming controller and a powerful 3 watt LED that produces green light output ideal for tactical and professional operations.

The HL-85-3W1-GREEN Green LED handheld spotlight is a rugged and powerful LED spotlight that produces an intense beam of green colored light capable of reaching more than 500 feet. This professional grade LED spotlight is designed to give users in the military, law enforcement, security and hunting fields a rugged and dependable source of green illumination in an easy to operate and service design, and features a powerful 3 watt LED emitter that has been paired with high efficiency optics for maximum output and efficiency. The LED in this spotlight has a 120,000 hour service life and produces green light natively, meaning there is no filter or colored lens to reduce output or distort the beam. The UV and weather resistant housing is constructed of impact resistant nylon, and the lamp assembly is fully potted and machined from a single piece of high grade aluminum, giving this high power spotlight excellent durability even under abusive conditions. For more information visit www.Larsonelectronics.com.

Larson Electronics announces infrared LED emitter

Larson Electronics said May 1 that it has released a 12 watt infrared LED light emitter designed to provide output and operation suitable for medical applications. The LEDLB-4E-IR-M-110V medical infrared LED light bar provides those in the medical field with a powerful and effective source of infrared light that can operate from standard wall outlets and be magnetically mounted to metallic surfaces for easy control and precise application.

The LEDLB-4ET-IR-M-110V 110 is designed to provide professionals in the medical fields with high output source of infrared light in a versatile and easy to manage design. With current medical studies showing promising results from the use of infrared light in a variety of fields including dermatology and neurology, this high power infrared LED light bar is an easy to operate infrared light source intended for application in these fields. This

LED light bar produces invisible infrared light in the 850 or 940nm portion of the light spectrum depending upon configuration, making it ideal for professionals utilizing these wavelengths in their treatment and therapy plans.

For added versatility and ease of use, Larson Electronics has fitted these units with three magnetic mounting pads. This lamp can be securely attached to just about any metal surface, making it ideal for applications where professionals need to easily move the unit to various locations for optimal coverage. For more information visit www.Larsonelectronics.com.

Larson Electronics unveils LED cart system

Larson Electronics Magnalight said May 6 that it has made public the EPL-RPS-1MLED rechargeable, explosion proof LED light cart. Designed to run 11 hours on a single charge, the Class 1 and Class 2 Division 1 LED light can illuminate a work area of more than 5000 feet.

The EPL-RPS-1MLED rechargeable hazardous area LED lighting system is powered by 140 amp hours of battery capacity. A 100 foot cord is included and the rechargeable, explosion-proof lighting system can be charged inside or outside the hazardous area. Housed within an aluminum wheeled cart, this 380 pound LED lighting system is easily maneuvered to different locations. Operators can use the light free from grid or generator power, while avoiding cord trip hazards. Customization, including stainless steel carts, larger tires, and elevated lighting options are available.

For more information visit www.Magnalight.com.

LT Environmental Converts to CNG Vehicles

LT Environmental Inc., a Colorado environmental engineering firm, said May 9 that it has hit another home run announcing the addition of two compressed natural gas vehicles to service its Rocky Mountain Region clients.

The Rocky Mountain Region, including Colorado, has been one of the largest natural gas producers since the early 1900s. “The conversion of our field fleet to CNG over the next few years will support our oil and gas clients and Colorado, promote cleaner air by reducing green house gases, and save fuel costs,” said John Peterson, executive vice president.

LTE recognizes the advantages of using CNG as a transportation fuel: domestic availability, a growing distribution system, lower costs and clean-burning. The estimated reduction in GHG

emissions is expected to range up to 20 percent per vehicle. This supports regional and LTE initiatives toward keeping the environment cleaner for employees and the public.

LT Environmental is a full-service environmental engineering company specializing in compliance, engineering, remediation, and safety services for private and public entities throughout the Rocky Mountains. For more information visit www.ltenv.com

Larson unveils light with reel for hazardous areas

Larson Electronics said May 6 that it has added a Class 1 and Class 2 division 1 explosion proof LED light designed for use in hazardous location areas. The unique feature of this lighting configuration is that both the light and reel can be used with the hazardous area.

Featuring lower operating temperatures, brighter light and drop proof durability, the EHL-LED-7W-50-HR explosion proof hand lamp with 50 foot SOOW cord reduces the need for re-lamping and maintenance. Equipped with a 10 watt LED bulb, this LED hand lamp is suitable for areas requiring UL Class 1 and Class 2 lighting. The explosion proof reel offers a Class 1 Division 1 and Class 2 Division 1 rating, so that both the reel and the trouble light can be installed in hazardous location areas.

Larson Electronics offers a wide array of UL Class 1 and Class 2 rated LED lighting, including surface mount linear fluorescent replacements, explosion proof LED flashlights and pedestal mount LED lighting for hazardous location areas. For more information visit www.Magnalight.com.

Abrasives Inc. new authorized Clemco distributor

Abrasives Inc., of Glen Ullin, N.D., said May 1 that it has been appointed an authorized Clemco distributor for the state of North Dakota. Abrasives has completed comprehensive product and process training at Clemco headquarters in Washington, Mo. Authorized distributors provide application and technical advice, maintain product and parts inventories, and provide local product availability for excellent customer service.

Clemco Industries Corp. is the largest air-powered abrasive blast equipment supplier in the world with portable and industrial product lines for cleaning, paint stripping, surface preparation, finishing and shot peening. Product offerings include: blast machines, operator safety equipment, manual and automated blast cabinets, and blast rooms.

An employee-owned corporation, Abrasives Inc. is home to Black Magic "The Tough Stuff" coal slag, a blast-cleaning favorite throughout the United States and Canada.

Black Magic is an environmentally friendly and high quality blast media available in multiple grit sizes. Abrasives is also home to Dakota Gold silica sand and distributes a full line of blast material including Starblast, steel shot and grit, garnet, aluminum oxide, soda and custom orders. For more information, visit www.AbrasivesInc.com.

Arrow Truck Sales sponsors recruiting ad contest

As reported by TheTrucker.com June 10 a driver shortage is prompting carriers to look for ways to attract professional drivers to their companies. The Women In Trucking Association is launching its "Recruiting Ad Contest" sponsored by Arrow Truck Sales. The contest will honor carriers whose advertisements focus on attracting women to their companies.

"Women look for different information in a recruiting ad than men," said Ellen Voie, WIT's president and CEO. Research conducted by University of Wisconsin-Stout graduate students found that women value home time and benefits above other incentives.

"We are proud to support this initiative," said Lane Bartram, Arrow Truck Sales marketing manager. "As a supplier of pre-owned trucks, we are sensitive to the buying power women have in the trucking industry and we believe the recruiting ads should reflect these changing demographics."

Any carrier or their advertising agency can submit their best print recruiting ads for this award. The ads must have been created and printed between Jan. 1 and Dec. 31 and submissions must include the name and date of publication. Deadline for submission is Dec. 31 and can be sent to recruitingcontest@womenintrucking.org.

For more information visit www.WomenInTrucking.org.

Larson offers new hazardous location LED light

Larson Electronics said June 5 that it has released a new hazardous location LED designed to provide the same functionality and mounting as traditional fluorescent fixtures but with improved performance and reliability. Featuring improved LED tube lamps and built-in emergency battery backup, the EPL-EMG-48-4L-LED-G2 is ideal for operators who need powerful illumination and the ability to maintain lighting in the event of power failures.

The EPL-EMG-48-4L-LED-G2 explosion proof emergency LED light is an ideal lighting solution for operators who want an improved source of hazardous location compliant lighting capable of providing emergency operation during conditions where power may be abruptly interrupted. This LED light fixture is U.S. and Canada U.L. approved Class 1 Division 1 & 2 and Class 2 Division 1 & 2 for use in areas where flammable chemical and petrochemical vapors are present and carries paint spray booth

light certification with a T6 temperature rating as well. The housing is formed from copper free aluminum for light weight and high strength and features heavy gauge aluminum reflectors with a high gloss finish for durability and excellent light dispersal. Since these fixtures utilize LED tube lamps rather than standard fluorescent tubes there is no ballast, and instead a battery backup system has been installed to provide greater functionality. For more information visit www.Larsonelectronics.com.

Larson unveils LED designed for high bay lighting

Longtime leader in industrial lighting Larson Electronics said June 14 that it has released a 150 watt LED light designed for high bay lighting installations that provides output comparable to a standard 400 watt metal halide light in a smaller fixture that

uses half the power. The GAU-HB-30X5W-1227 LED High Bay Light is lightweight and compact in size yet produces 14,790 lumens of light output, making it an ideal alternative to bulkier, hot running and less reliable metal halide high bay fixtures.

The high bay light is a powerful and rugged industrial grade lighting solution that gives operators the ability to replace their bulky and aging HID lighting systems with a light weight, efficient, and longer lived alternative. This LED high bay light pulls only 150 watts at 1.25 amps from standard 120 VAC, yet produces light output comparable to that of 400 watt metal halide light fixtures. Like metal halide fixtures, the light from this LED light is bright white and very evenly distributed, but unlike metal halide, these LED fixtures run much cooler and do not experience color shifting and erratic operation as the lamp ages. These fixtures also do not require any ballast or large reflector assembly, making them smaller, lighter and more reliable than standard HID systems which require ballasts to power the bulb and large reflectors to effectively distribute light output. For more information visit www.larsonelectronics.com.

NETZSCH signs new distributors for Florida

NETZSCH, the world's largest manufacturer of progressing cavity pumps and rotary lobe pumps for the municipal market, said June 28 that it is pleased to announce the signing of TSC-Jacobs Inc. as their distributor in Southern Florida and TSC-Jacobs North in Northern Florida to service the municipal marketplace in this region.

Paul S. Jacobs, Todd Rubens, P.E., and David Mueller, P.E., at TSC-Jacobs Inc. along with John Verscharen, P.E., and Paul Wachter, P.E., in the north office collectively offer their tradition of bringing quality products and dynamic services to provide engineered products to the municipal markets of Florida.

NETZSCH Pumps North America LLC is proud to have the knowledgeable staff of TSC-Jacobs and TSC-Jacobs North to provide the experienced Municipal product knowledge and support to this expanded region.

NETZSCH Pumps announces Kisler to manager position

NETZSCH Pumps North America LLC recently named Robert Kisler the national sales and product manager for the TORNADO product line with responsibility for North America for both the industrial and municipal markets. For more than 25 Kisler has spent the majority of his career in the rotary lobe pump, flow systems marketplace and has extensive channel partner experience. He is based in Akron, Ohio.

ROBERT KISLER

NETZSCH is the world's largest manufacturer of progressing cavity pumps, macerators, dosing systems, accessories and an innovative technology leader of rotary lobe pumps. NETZSCH provides pumps and systems to industrial and municipal markets globally and is committed to business growth beyond market levels.

CST Storage launches mobile temporary storage tank

CST Storage, the global leader in engineered and factory coated storage solutions, announces the launch of HydroTec MB, an innovative pre-engineered portable storage system with unmatched structural integrity.

HydroTec MB features a chime panel epoxy coated tank design with gaskets as a frame, and a single or double covered 40mil form-fit LLDPE liner that is bolted to the tank. The liner is attached to the tank with a proven, engineered connection used currently with biogas storage systems. No C-clamps or makeshift attachments are used. Available for capacities from 4,700 barrels to more than 42,700 barrels, HydroTec MB tanks may be constructed on site in as little as two to four days. Grounded in approved design standards and priced competitively, HydroTec MB is a reusable solution that features a small footprint with vertical capacity. Pre-engineered for use with a dome or cover, HydroTec MB may be designed with one or two rings.

All HydroTec MB tanks are manufactured at ISO Certified facilities in the U.S. using a Trico-Bond EP epoxy coating system for long-term durability. For more information visit www.cst-storage.com.

Ebeltoft Sickler attorney Grant attends law course

NICHOLAS GRANT

Ebeltoft . Sickler . Lawyers said July 23 that attorney Nick Grant attended the Rocky Mountain Mineral Law Foundation's Oil and Gas Law "Short Course" held in Houston. The week-long course is one of the most comprehensive continuing education courses available for attorneys, landman, and other professionals who work in the oil and gas industry, and draws attendees from countries such as Nigeria and Brazil. It covers a diverse range of industry-specific topics, including petroleum exploration to drafting joint operating agreements. The short course is taught by law professors who specialize in oil and gas law, as well as by various industry professionals.

The Rocky Mountain Mineral Law Foundation is a collaborative educational non-profit organization dedicated to the scholarly and practical study of the law and regulations relating to mining, oil and gas, water, public lands, land use, conservation, environmental protection and other related areas.

Ebeltoft . Sickler . Lawyers consists of nine lawyers serving Bakken-based businesses in North Dakota and Montana. Practice groups provide legal expertise for: corporate due-diligence, merger, acquisition and business sale negotiation and completion, and leasing, purchase or sale of real estate and developer contracts, appearances for planning and zoning and litigation relating to governmental decisions, and environmental claims litigation.

Lynden International launches newly designed website

Lynden International, a full-service freight forwarding and logistics company, has launched a newly designed website at www.lynden.com/lint. The expanded and enhanced site was created by Lynden's marketing team to update and improve content and make navigation easier for new and current customers.

"We spent more than a year researching and fine-tuning the changes," said Marketing & Sales Support Director Dorene Kolb. "Our goal was to make it easier for customers to find us online and then to find what they need on our site within two clicks of the mouse."

The new site offers user-friendly "solutions" pages with a case study and brochure for each to help customers learn more about Lynden services such as Global Coverage, Tradeshow, Oil & Gas and Pharmaceutical. The pages help customers research transportation and logistics projects and access the shipping tools they need. Each page also features an icon to "get a quote or learn more" and allows customers to log onto EZCommerce to track shipments or use Lynden's LIVE CHAT feature to talk to a Lynden representative.

Lynden International is one of the Lynden family of companies, whose combined capabilities include: worldwide air and ocean forwarding, third-party logistics, trade show shipping, shipping to Alaska, truckload and less-than-truckload transportation, scheduled and charter barges, intermodal bulk chemical

hauls, scheduled and chartered Hercules L-382 cargo aircraft and multi-modal logistics.

Quality Mat helped complete a \$75,000 fundraiser

Quality Mat said June 28 that it was pleased to feature Young Life in Southeast Texas as its nonprofit organization of the month. Young Life is an organization of caring adults committed to reaching out to kids and being involved in their lives in a variety of ways. That involvement takes many forms, from attendance at sporting event or school functions, to simply being a sounding board for youth concerns.

Quality Mat helped complete a \$75,000 peaches fundraiser for the Young Life organization, which purchased 170 cases of peaches to donate to local nursing homes, food banks and its own employees.

Young Life fosters a multicultural ministry that begins in middle school and can continue through a youth's college years. By physically going out into the youth world, organization leaders work with kids in economically depressed areas, teen mothers and with developmentally disabled individuals. A weekly program called club provides kids with a socially acceptable alternative to roaming the streets on weeknights. Week-long camp program combine days of unparalleled fun along with the message of God's unconditional love. Campaigners allow kids to grow spiritually through weekly faith study, service and leadership.

Without the work of dedicated adults, Young Life's work would not occur. As a manufacturer of quality construction mats, Quality Mat Co. believes wholeheartedly in supporting the work of organizations that give youth strong foundations for the future.

Halcon Resources to present at EnerCom's conference

FLOYD C. WILSON

Halcon Resources Corp. said that Floyd C. Wilson, chairman and CEO, is scheduled to present at EnerCom's The Oil & Gas Conference 18 in Denver, Colo., on Aug. 13 at 3:30 p.m. EDT.

The slide presentation and a link to the live audio webcast will be available on the company's website at www.halconresources.com on the day of the presentation.

The live webcast will also be available on The Oil & Gas Conference website at <http://theoilandgasconference.com/webcast.shtml>.

Halcon Resources Corp. is an independent energy company engaged in the acquisition, production, exploration and development of onshore oil and natural gas properties in the United States.

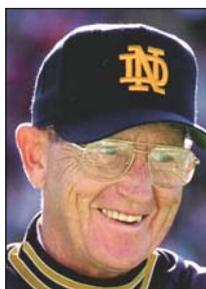

Bakken Oil Workers & Oil Service Expo Aug. 20-22

The Bakken Oil Worker's and Oil Service Expo may just be one of the biggest happenings of the summer in North Dakota. Just three weeks after the North Dakota State Fair, the Expo, nicknamed the "Bakken Oil Expo" will be held Aug. 20-22 at that North Dakota State Fair Center in Minot, N.D. The event features networking opportunities, seminars and workshops, privately hosted meals, a reception, job opportunities and the ability to set up one-on-one appointments in advance with current and prospective business clients and employers. Along with these opportunities, the show has a huge indoor and outdoor exhibit show with companies and organizations coming from 36 states and Canada. With more than 400 booth spaces, this is this one of the largest oil industry events in the northern U.S.

Seminars will run concurrently in the mornings and afternoons all three days offering attendees the opportunity to enhance their knowledge in training sessions and hands on classes.

For more information on the event, or to register, visit www.usasymposium.com/bakken.

Legendary football coach to headline 2013 NDPC meeting

LOU HOLTZ

The North Dakota Petroleum Council announced that legendary Notre Dame football coach Lou Holtz will provide a keynote address during the NDPC's Annual Meeting to be held Sept. 18 at the Alerus Center in Grand Forks, N.D. Holtz took his Notre Dame teams to nine straight New Year's Day bowl games from 1987 through 1995 and remains 11th on the NCAA all-time win list for Division I-A coaches.

"The petroleum industry has had incredible success in helping our economy and our country, and I am delighted to be joining the North Dakota Petroleum Council and its members in Grand Forks," said Holtz. "There are a great deal of similarities between being a coach and one of the many industry leaders who have seized this tremendous opportunity to help move our state and nation forward. Just as on the athletic field, the ability of leaders to adapt, find solutions for evolving challenges and issues, and capitalize on opportunities makes for a winning proposition."

Also joining Holtz as a featured speaker at the Annual Meeting will be Bill Maloney, Statoil's general manager of North America; Burlington Northern Santa Fe's CEO Matt Rose; and North Dakota Gov. Jack Dalrymple. For a full schedule and agenda of speakers, visit <https://annualmeeting.risprojects.org/agenda.aspx>.

LTE's Jeff Citrone attends work safe conference

LTE employee Jeff Citrone, P.G., director of Health and Safety Compliance, attended the recent press conference promoting the State of Colorado Proclamation to launch the WorkSafe Colorado initiative. WorkSafe Colorado is statewide campaign and outreach program focusing on improving workplace safety in Colorado with an executive board made up of representatives from industry, state and federal government, academia, community and professional organizations. Citrone is a member of the WorkSafe Colorado executive board.

As representatives from the Colorado Chapter of American Society of Safety Engineers, Past Chapter President Jeff Citrone, Chapter President-Elect Rick Zellen, and Chapter President Lane McKnight attended the press conference to represent their professional organization and answer questions from the public and media.

Vision named second for growth in 2013 Fast 100

Vision Oil Tools LLC was named in Houston Business Journal's "2013 Fast 100" list in August. The Fast 100 recognizes private companies that have experienced significant growth during a two year period. With more than 160,000 private companies in the Houston metropolitan area, Vision was proud to be included.

On Sept. 6, the Houston Business Journal ranked Vision as the second fastest growing private company with 984 percent growth for 2010 to 2012. Vision's CEO, Gary Roberts, accepted the award on behalf of the company at a luncheon attended by more than 700 sponsors, nominees and business leaders.

"Our employees deserve this award. Their dedication and hard work made it possible for us to achieve this exceptional growth and we look forward to continued growth in 2013 and beyond," said Roberts.

Vision Oil Tools is a leading solution provider for well fishing services and oilfield rental tools to the oil and gas industry. With operations in North Dakota, Wyoming, Colorado and Texas, Vision boasts more than 800 years of oilfield management experience and 36,000 square feet of operations facilities.

For more information about Vision Oil Tools visit www.visionoiltools.com.

Dr. Howard Reeve now certified with the NRCME

Trinity Health Occupational Medicine provider Dr. Howard Reeve recently completed all requirements necessary to become certified with the National Registry of Certified Medical Examiners. The NRCME is a list of examiners who have been trained, tested and certified to perform physical examinations for commercial motor vehicle drivers in interstate commerce.

Administered by the Department of Transportation and the Federal Motor Carrier Safety Administration, the Registry is a new program designed to make the nation's highways safer by

requiring that all examiners performing physical examinations be trained and certified before May 21, 2014.

To maintain a listing on the National Registry, certified examiners must comply with training, testing and FMCSA administrative requirements, including refresher training every five years and certification testing every 10 years. More information on the NRCME can be found at <https://nationalregistry.fmcsa.dot.gov/NRPublicUI/home.seam>.

Dr. Reeve has performed DOT/CMV examinations and practiced occupational medicine for more than 20 years, making him one of the region's most experienced physicians in his field. In addition to providing DOT and non-DOT physicals, he performs pre-work screens, fit-for-duty exams, respirator fit tests, and travel or administrative and FAA flight physicals. He also cares for patients with work-related injuries.

DR. HOWARD REEVE

LTE employee attends recent signing of Colorado bill

LTE employee Nick Talocco, P.E., attended the recent signing of Colorado State Bill 161-6. This bill reauthorizes the Professional Engineering Licensure Requirements for the State of Colorado. Talocco attended the signing as a representative of American Society of Civil Engineers, Colorado section. Talocco has been serving as the section vice president and will be serving as president of the Colorado section starting in October. The Colorado section was founded in 1909 and has actively been involved in the advancement of the science and profession of civil engineering in the great state of Colorado.

Inc. Magazine ranks Fortis top 100 energy companies

Fortis Energy Services, formerly Arrow Energy Services, a leading national oil and gas service company providing oil and gas well services throughout the production life cycle, announced that it has been named to the Inc. 5000 list, an exclusive ranking of the nation's fastest-growing private companies.

Fortis made the list with a three-year revenue growth of 64 percent and was listed as one of the top 100 energy companies in the nation.

"It is truly an honor to be among the top 100 Energy Companies in the USA," said Fortis CEO Nathan Conway. "This award serves as an example of our deep commitment to the energy industry. It helps solidify our reputation as a leader in the oil and gas business and serves as a platform to further increase our strong customer relationships."

Headquartered in Michigan, Fortis offers services throughout the Midwest and Northeastern states including: Michigan, Pennsylvania, West Virginia, Ohio, New York, Indiana, North Dakota and Illinois.

Tremcar announces hire of new VP international

Jacques Tremblay, chairman of the board of Tremcar Technologies Inc. said Andy Mulvey, formerly of Fleetstop Trailers of Calgary, has joined the Tremcar team as VP international.

Mulvey will be focusing on developing the American market and will share his time between the head office in Canada and the Strasburg, Ohio, office.

A DOT design engineer originally from Glasgow, Scotland, he comes to Tremcar with more than 25 years of experience in the tank trailer industry. Mulvey was with Trimac for a number of years and worked in Michigan for 13 years with such companies as Quality Carriers and Mid Michigan Equipment Corp.

Deep casing tools delivers 100th tool

Deep Casing Tools, which develops an innovative range of tools designed to land casing and completions at target depth within oil or gas wells, has delivered the 100th tool off the production line.

The 100th tool was included in a batch of Turbocaser Express tools that were dispatched to the Gulf of Mexico for application in field development drilling in approximately 3,650 feet of water. Deep Casing Tools' unique drill through technology provides significant time and cost savings when compared to conventional methods. Landing casing and completions at target depth first time, avoiding wiper trips and wellbore damage, is a

game changer for improved well construction.

Lance Davis, CEO of Deep Casing Tools, said: "The delivery of our 100th tool coincided with the first planned deployment in the deepwater Gulf of Mexico for the Turbocaser Express. These two achievements are significant and have occurred since the company established the US subsidiary Deep Casing Tools Inc." Deep Casing Tools Inc. is headquartered in Houston, and is responsible for deployment of the technology both in the Gulf of Mexico and onshore locations.

BTL announces new frack tank liners with Armorkote

BTL has announced the introduction of new frack tank liners to its line of inventory. With superior flexibility and toughness, improved UV resistance and increased seam strength these new frack tank liners are perfect for oil and gas drill sites, fresh water, produced waters and flowback containment and are perfect for in-ground and above ground use.

In addition to its new frack tank liners, BTL also offers the Polar Cap, insulated covers to prevent freezing of stored liquids and minimizing evaporation of hydrocarbons from holding tanks. The finished covers are flexible to minus 85 degrees F, are third-party quality tested, easily folded and rolled, designed for ease of re-use and cost effectiveness and fabricated in the USA

from 100 percent North American materials.

Since pioneering the development of heavyweight reinforced polyethylene geomembrane liner products in the 1980s, BTL has been the industry recognized leader in RPE liners, with sales volumes of our BTL and PPL liners approaching 50 million square feet annually. For more information visit www.BTLliners.com.

OFS Energy Fund completes asset acquisition of WT3

OFS Energy recently formed Terra Oilfield Services LLC in order to recapitalize WT3 LLC, a provider of water transfer and treatment services to the oil and gas industry. James Wingo and Stan Peach, WT3's co-owners will continue as TerraOFS' management team.

"James and Stan are experts in their field, and they have assembled a reliable team to provide creative and reliable water solutions during critical phases of the frack process," said Jerad McMayon, partner of OFS. "TerraOFS' management has deep knowledge of drilling, completions and chemicals, and our fund is pleased to provide capital and other resources to help support TerraOFS' growth in those areas."

TerraOFS is a water transfer and fluids management company focused on providing critical services to the oil and gas industry primarily during the drilling and fracturing process. TerraOFS is headquartered in Conroe, Texas, and has operations in most major shale basins in North America.

Petroleum News Bakken

Our writers scout for news the old-fashioned way — digging through government agency files, covering legislative hearings, scrutinizing SEC filings and developing contacts within industry and government.

A weekly newspaper, Petroleum News Bakken is published every Sunday.

Similar to its sister publication in Alaska, the Bakken newspaper is written specifically for industry and government readers, plus financial analysts that cover companies with operations in the Bakken play in North Dakota, Montana, Saskatchewan and Manitoba.

Petroleum News Bakken covers the oil companies working in the Bakken, including all the following topics and more: government oversight and regulation, technical advances in drilling and completion, development and production, exploration and evaluation, transportation and pipelines, finance, research, natural gas processing and marketing, refining and petrochemicals, finance and economics, and the geology of the Bakken petroleum system in the Williston Basin. The newspaper also touches on other petroleum systems in the Williston Basin, such as the Red River.

Petroleum News Bakken

Eastern edge of Watford City, ND

Picture above is an industrial park on the east edge of Watford City, ND, near the Bakken. The park is owned by the U.S. Census Bureau and has a population of 1,433 people. Today, the officials are trying to get the result of a projected 2,500 person increase in the population from the Bakken oil and gas fields in western North Dakota's burgeoning oil and gas industry.

SEC suspends trading of Norstra Energy stock until July 10

The U.S. Securities and Exchange Commission issued an order June 26 suspending trading of Norstra Energy's securities until July 10 due to questions the SEC said "have arisen concerning the adequacy and accuracy of" its press releases and other public statements concerning Norstra's business operations. The SEC's order said "It appears to the Securities and Exchange Commission that there is a lack of current and accurate information concerning the securities of Norstra Energy Inc."

June ND flaring apps increase; 13 operators seek permission to flare wells in six counties

Applications submitted to the North Dakota Industrial Commission seeking permission to flare natural gas from producing wells increased substantially in June. Only three operators submitted flaring applications in May, and those applications were limited to McKenzie and Williams counties. In contrast, 13 operators submitted applications in June seeking authorization to flare wells across six northwestern counties. While most of the flaring focus is again in McKenzie and Williams counties, numerous applications were submitted for flaring approval in Dunn, Moorhead and Divide counties, and two applications were submitted for flaring in Burke County.

Williams County applications

In the Todd field, most of which lies in southern Williams County with a small portion extending under the Missouri River into northern McKenzie County, Continental Resources, Statoil and Zenergy filed a joint application asking permission from the commission to flare all wells not connected to gathering infrastructure in the field. Statoil identified two wells and indicated the wells should be connected to a Coshok system by Sept. 30. Likewise, Zenergy identified two wells it wants to

Nominations up

Most acres nominated for August NDTL lease auction lie on Bakken fringe. **By MIKE ELDER** For Petroleum News Bakken. On July 1, the Minerals Management Division of the North Dakota Department of Trust Lands released a list of nominated tracts for the August 10 August oil and gas lease auction, and not only is the total acreage the highest for an August lease auction since 2006, but most of the nominated acreage is on the fringe of what is generally considered the extent of the Bakken petroleum system. However, the nominated acreage has not yet been vetted and some could possibly be pulled before the final auction list is issued later in the summer.

NuStar aims to grow storage

Great Northern signs on for about 30,000 barrels of 70,000 additional capacity. **By GARY PARK** For Petroleum News Bakken. NuStar Energy, which has 97 million barrels of global storage capacity, is testing market response to plans for expanding its train terminal in Louisiana by tapping into a mix of North Dakota Bakken crude and bitumen from the Alberta oil sands. Enacted as the second-largest liquids terminal operator in the United States, NuStar announced late June that it has inked a three-year agreement with Great Northern Oil Co. to move Bakken crude and heavy Canadian crude to its St. James facility, starting in the fourth quarter.

U.S. reserves rise 45%

Ernst & Young study: Bakken system, other tight plays contributes to growth. **By RAY TYSON** For Petroleum News Bakken. The Bakken petroleum system and other tight, unconventional oil plays were largely responsible for a 45 percent rise in U.S. oil reserves over the past five years, according to a recent study by accounting firm Ernst & Young. Investments in the U.S. oil and gas sector also reached their highest level in a decade, the study revealed. The Ernst & Young study does not provide reserve and capital spending totals for specific tight oil plays. Rather, reserves and spending were gleaned from year-end reports submitted to the U.S. Securities and Exchange Commission by the country's 50 largest publicly traded companies. The study covers both onshore and offshore. Nor does the study break down company reserves and capital spending by field or region. But the Bakken's two biggest players are listed among the top 50 in both categories. Continental Resources is ranked fifth in capital spending and 13th in oil reserves, while Whiting Petroleum is ranked 22nd in capital spending and 19th in oil reserves.

Bakken's reserve potential

However, unrelated studies leave no doubt that

archerwell.com

We are Archer.

Cost effectiveness and operational efficiency is necessary in the development of unconventional shale basins and to ensure the integrity of the well. Archer delivers a comprehensive and specialized offering of products and services needed to achieve economic shale development and well integrity. From frac valves and pressure pumping to well intervention and specialized oil tool products, Archer has what you need to get the most out of every well.

Pressure Pumping • Wireline • Coiled Tubing • Frac Valves • Directional Drilling • Snubbing • Nitrogen • Oiltools
